**FILE REF.:** Case # V 16-5040 Tessera Subdivision

**ISSUE:**

Homewise Inc., Applicants, Design Enginuity, Agent, request a variance of Chapter 7, Section 7.13.11.7, Water Harvesting of Ordinance No. 2015-11, the Stainable Land Development Code (SLDC). The Applicant proposes that the remaining 34 lots within the Tessera Subdivision Phase I not be required to provide water harvesting cisterns for homes that are less than 2,500 sq. ft. of heated floor area. The Tessera Subdivision is within the Tres Arroyos del Poniente Community District (TAPCD) Overlay and is zoned as a Planned Development District (PD-4). The property is located via NM 599, within Section 20 & 17 Township 17 North, Range 9 East, Commission District 2.

## SUMMARY:

The Applicants acquired the property as evidenced by warranty deeds recorded in the records of the Santa Fe County Clerk on September 28, 2012, as Instrument # 1683091. The Tessera Residential Subdivision Phase One and Phase Two Plat were recorded in the Santa Fe County Clerk's Office on April 5, 2007, Page 5-14 Book 631. Prior to enactment of the SLDC, development on these lots were subject to the rainwater catchment requirements of Ordinance No. 2003-6. Ordinance No. 2003-6 required homes of 2,500 sq. ft. of heated area or greater to install a cistern, and homes smaller than 2,500 sq. ft. of heated area to install rain barrels.

On January 15, 2016, the SLDC came into effect, repealing Ordinance No. 2003-6, and changing the rainwater catchment requirements. SLDC, Chapter 7, Section 7.13.11.7.2 states: "[s]tructures whose roof surface is 2,500 sq. ft. or greater shall install a cistern that is buried or partially buried and insulated." The Section goes on to state, "[a] structure whose roof surface is 2,500 sq. ft. or less, and any accessory structure whose roof area is 500 sq. ft. or greater shall install rain barrels, cisterns, or other water catchment systems including passive water harvesting and infiltration techniques, berms, swales, and tree wells to capture rainwater from a minimum of 85% of the roofed area."

The Applicants state that with the adoption of the SLDC, a significant code change occurred in regards to the storm water harvesting provisions. The previous code required the installation of cisterns for homes of 2,500 sq. ft. or more of heated area. The SLDC now requires cisterns for homes with 2,500 sq. ft. of roofed area. Homes of 1,800 or 1,900 heated sq. ft. now have to install cisterns and that this is a huge cost on a moderately priced home. The required cistern systems are typically 3,000 gallons in size and cost \$10,000 to \$14,000 to install. The Applicant also states that prior to the adoption of the SLDC, if a cistern was required, it could be sized to accommodate a one month demand of irrigation water. Many of these homes in the Tessera community use very little water outdoors. The Tessera project has a natural coverage of pinon and juniper trees. Homewise installs xeriscape landscaping in the front yard. Typically, adding two trees and three shrubs on a drip system along with rock mulch with a weed barrier. Annual water demand for the trees is about 750 gallons (10' diameter tree @ 9.49 gal /sf per NM Office of the State Engineer Technical Report 48), and the shrub is 80 gallons (3' diameter shrub @ 8.89gal/SF). Thus, the anticipated annual irrigation water demand at Tessera is 1,740 gallon per year. Homes in Tessera typically have rain barrels beneath canales that provide much of the needed irrigation water, and it seems illogical to require homeowners to install a system that far exceeds their needs especially at a cost that some buyers cannot afford.

The Applicants request a variance of Chapter 7, Section 7.13.11.7, Water Harvesting of the SLDC. The Applicant proposes that the remaining 34 lots within Phase I of Tessera Subdivision be allowed to adhere to prior County water harvesting requirements which were set forth in Ordinance No. 2003-6 (An Ordinance Amending Ordinance 1996-10, the Santa Fe County Land Development Code. Article III, Section 4.4.1 and Article III, Section 2.4.1 to require rainwater catchment systems for all commercial and residential development). Both Ordinance No. 2003-6 and Ordinance No. 1996-10 were repealed when the SLDC was adopted.

Tessera Phase 1 Residential Subdivision consists of 87 lots, which are zoned as a Planned Development District (PD-4) and is within the Tres Arroyos del Poniente Community District Overlay (TAPCD), as defined by the SLDC, Chapter 8, Section 8.10.3.

The applicable requirements under the Santa Fe County Sustainable Land Development Code, Ordinance No. 2015-11 (SLDC), which govern this Application are the following:

Chapter 7, Section 7.13.11.7.2, Water Harvesting, Catchment Requirements, Residential Structures states:

- a. Systems shall be designed to capture rainwater from a minimum of 85% of the roofed area.
- b. Structures whose roof surface is 2,500 sq. ft. or greater shall install a cistern that is buried or partially buried and insulated. The cistern shall be connected to a pump and a drip irrigation system to serve landscaped areas. Alternatively, if captured water is to be used for domestic purposes, appropriate plumbing and pumps may be used to convey that water to the point of use.
- c. A structure whose roof surface is 2,500 sq. ft. or less, and any accessory structure whose roof surface is 500 sq. ft. or greater shall install rain barrels, cisterns or other water catchment system including passive water harvesting and infiltration techniques, berms, swales, and tree wells to capture rainwater from a minimum of 85% of the roofed area.
- d. Cisterns shall be sized to hold 1.15 gallons per square foot of roof area that is captured.

Chapter 14, Section 14.9.7.1, Variances, Purpose, states:

The purpose of this section is to provide a mechanism in the form of a variance that grants a landowner relief from certain standards in this Code where, due to extraordinary and exceptional situations or conditions of the property, the strict application of the code would result in peculiar and exceptional practical difficulties or exceptional and undue hardship on the owner. The granting of an area variance shall allow a deviation from the dimensional requirements of the Code, but in no way shall it authorize a use of land that is otherwise prohibited in the relevant zoning district.

Chapter 4, Table 4-1, Procedural Requirements by Application, defines the review/approval process for a variance request.

Chapter 14, Section 14.9.7.4, Variance Review criteria states:

A variance may be granted by only a majority of all the members of the Planning Commission (or the Board, on appeal from the Planning Commission) where authorized by NMSA 1978, Section 3-21-8(C):

1. Where the request is not contrary to public interest;

2. Where, owing to special conditions, a literal enforcement of the SLDC will result in unnecessary hardship to the applicant; and
3. So that the spirit of the SLDC is observed and substantial justice is done.

Chapter 14, Section 14.9.7.5 Variance Conditions of approval.

1. The Planning Commission may impose conditions on a variance request necessary to accomplish the purposes and intent of the SLDC and the SGMP and to prevent or minimize adverse impacts on the general health, safety and welfare of property owners and area residents.
2. All approved variances run with the land, unless conditions of approval imposed by the Planning Commission specify otherwise.
3. All approved variances automatically expire within one year of the date of approval, unless the applicant takes affirmative action consistent with the approval.

As required by the SLDC, the Applicants presented the Application to the Technical Advisory Committee (TAC) on March 17, 2016, at the regular scheduled monthly meeting, which satisfied the requirements set forth in Chapter 4, Section 4.4.4.3 Pre-application TAC Meeting and Table 4-1.

Notice requirements were met as per Chapter 4, Section 4.6.3., General Notice of Application Requiring a Public Hearing, of the SLDC. In advance of a hearing on the Application, the Applicants provided an affidavit of posting of notice of the hearing, confirming that public notice posting regarding the Application was made for fifteen days on the property, beginning on April 13, 2016. Additionally, notice of hearing was published in the legal notice section of the Santa Fe New Mexican on April 13, 2016, as evidenced by a copy of that legal notice contained in the record. Notice of the hearing was sent to owners of land within 500' of the subject property and a list of persons sent a mailing is contained in the record.

This Application was submitted on March 22, 2016

**RECOMMENDATION:**

**Staff is unable to recommend approval because this request is not in compliance with the SLDC and because the criteria for a variance have not been met.**

**As part of the 6 month review of the SLDC staff will be recommending to the Board of County Commissioners that the rainwater catchment section be amended to require cisterns only on houses of 2,500 sq. ft. or greater of heated area.**

**Staff requests the Hearing Officer memorialize findings of fact and conclusions of law in a written order. The Santa Fe County Planning Commission (SFCPC) will be holding a public hearing on this matter on June 16, 2016.**

Santa Fe County Land Use  
Hand Delivered

RE: Variance of Cistern Requirements for Tessera Phase 1 Subdivision

Dear Sirs/Madams

With the adoption of the SLDC in December of last year, a very significant code change occurred with regards to the storm water harvesting provisions. Specifically the old code required the installation of cisterns for homes of 2,500 square feet or more of heated space. The SLDC now requires cisterns for homes with 2,500 square feet of roofed area. Thus modest homes of 1,800 or 1,900 heated square feet now have to install cisterns. This is a huge cost on a moderately priced home. The required cistern systems are typically 3000 gallons in size and cost \$10,000 to \$14,000 to install.

This significant code modification was not properly vetted. The change was buried in the new code and even Penny Ellis-Green was unaware of the change until it was pointed out to her after the code was adopted. The adopted Santa Fe County Sustainable Growth Management Plan match the previous code language: *"Conservation of water in new and existing development is important for conservation purposes. All new commercial or dwelling units of 2,500 sq. ft. of heated area or greater will include a cistern that is buried, partial buried or within an insulated structure and is connected to a pump and a drip irrigation system to serve all landscaped areas."* It seems that the change from heated space to roofed area may have been an inadvertent error.

Prior to the adoption of the SLDC, if a cistern was required, it could be sized to accommodate a one month demand of irrigation water. Many moderately priced homes in our community use very little water outdoors. The Tessera project has a natural coverage of pinon and juniper trees. Homewise installs xeriscape landscaping in the front yard. Typically adding two trees and three shrubs on a drip system along with rock mulch with a weed barrier. Annual water demand for the trees is about 750 gallons (10' diameter tree @ 9.49 gal/SF per NM Office of the State Engineer Technical Report 48), and the shrub is 80 gallons (3' diameter shrub @ 8.89gal/SF). Thus the anticipated annual irrigation water demand at Tessera is 1740 gallon per year. Homes in Tessera typically have rain barrels beneath canales that provide much of the

2. Fugitive Water. Fugitive water is prohibited. No person, firm, corporation, county, state, federal, municipal or other governmental facility or operation shall cause or permit the occurrence of fugitive water.

a. Fugitive water means the pumping, flow, release, escape or leakage of any water from any pipe, valve, faucet, irrigation system or facility onto any hard surface such that water accumulates as to either create individual puddles in excess of ten (10) square feet in size or cause flow along or off of the hard surface or onto adjacent property or the public right-of-way, arroyo, or other water course, natural or manmade. Fugitive water also means, during the irrigation of landscaping, the escape or flow of water away from the landscaping plants being irrigated even if such flow is not onto a hard surface.

b. Fugitive water shall not include:

i. Incidental run-off caused by vehicle washing provided that a shut-off nozzle is in use;

ii. Periodic draining of swimming pools and spas;

iii. Storm run-off, including snowmelt run-off;

iv. Flowing resulting from temporary water system failures or malfunctions;

v. Water applied, such as in the cleaning of hard surfaces, to prevent or abate public health, safety or accident hazards when alternate methods are not available. The washing of outdoor eating areas and sidewalks is not included in this exemption.

vi. Flow resulting from vandalism, high winds, emergencies and acts of God, or

vii. The occurrence of an unforeseeable or unpreventable failure or malfunction of plumbing or irrigation system hardware, prior to the issuance of a formal warning notice. Once a formal warning notice has been issued, the water user is instructed not to operate the faulty system until it is appropriately repaired, unless operating the system is integral to the operation of the facility. Once a warning notice has been issued, subsequent fugitive water events at the same location will be subject to issuance of citations.

7.13.11.7. Water Harvesting.

1. Rainwater Catchment Systems.

a. Rainwater catchment systems are required for all new construction whose roof area is 2,500 square feet or greater. Rainwater catchment systems are required for all remodeling of an existing structure whose roof area, after the remodeling, is 2,500 square feet or greater. Rainwater catchment systems are required of any accessory structure whose roof surface is 500 square feet or greater.

b. Systems shall be designed to capture rainwater from a minimum of 85% of the roofed area.

c. Structures whose roof surface is 2,500 sq. ft. or greater shall install a cistern that is buried or partially buried and insulated. The cistern shall be connected to a pump and a drip irrigation system to serve landscaped areas. Alternatively, if captured water is to be used for domestic purposes, appropriate plumbing and pumps may be used to convey water to the point of use.

d. A structure whose roof surface is 2,500 sq. ft. or less, and any accessory structure shall install as its rainwater catchment system: (i) rain barrels, (ii) cisterns, or (iii) passive water harvesting systems using berms, swales, or tree wells. The system shall capture water from at least 85% of the roofed surface.

e. Cisterns shall be sized to hold 1.15 gallons per square foot of roof area.

## 2. Catchment Requirements, Residential Structures.

a. Systems shall be designed to capture rainwater from a minimum of 85% of the roofed area.

b. Structures whose roof surface is 2,500 sq. ft. or greater shall install a cistern that is buried or partially buried and insulated. The cistern shall be connected to a pump and a drip irrigation system to serve landscaped areas. Alternatively, if captured water is to be used for domestic purposes, appropriate plumbing and pumps may be used to convey that water to the point of use.

c. A structure whose roof surface is 2,500 sq. ft. or less, and any accessory structure whose roof surface is 500 sq. ft. or greater shall install rain barrels, cisterns or other water catchment system including passive water harvesting and infiltration techniques, berms, swales, and tree wells to capture rainwater from a minimum of 85% of the roofed area.

d. Cisterns shall be sized to hold 1.15 gallons per square foot of roof area that is captured.

## 3. Catchment Requirements, Non-residential structures:

a. Systems shall be designed to capture rainwater from the roofed area.

b. Cisterns shall be buried, partially buried or insulated and shall be connected to a pump and a drip irrigation system to serve landscaped areas. Alternatively, if captured water is to be used for domestic purposes, appropriate plumbing and pumps may be used to convey that water to the point of use.

c. Cisterns shall be sized to hold 1.5 gallons per square foot of roofed area or the equivalent of a one month supply of water.

CASE # V 16-5040  
Homewise Inc,  
NOTICE OF PUBLIC  
HEARING

Notice is hereby given that a public hearing will be held to consider a request by Homewise Inc., Applicants, Design Enginuity, Agent, request a variance of Chapter 7, Section 7.13.11.7, Water Harvesting of Ordinance 2015-11, the Sustainable Land Development Code (SLDC). The Applicant proposes that the existing lots within the Tessera Subdivision be allowed to adhere to prior County water harvesting requirements which were set forth in Ordinance 2003-6 (An Ordinance Amending Ordinance 1996-10, the Santa Fe County Land Development Code, Article III, Section 4.4.1 and Article III, Section 2.4.1 to require rainwater catchment systems for all commercial and residential development). The Tessera Subdivision is within the Tres Arroyos del Poniente Community District Overlay (TAPCD) and is zone as a Planned Development District (PD-4). The property is located via NM 599, within Section 20 & 17 Township 17 North, Range 9 East (Commission District 2).

A public hearing will be held in the County Commission Chambers of the Santa Fe County Courthouse, corner of Grant and Palace Avenues, Santa Fe, New Mexico on the 28th day of April 2016, at 3:00 p.m. on a petition to the Santa Fe County Hearing Office and on the 16th day of June 2016, at 4:00 p.m. on a petition to the Santa Fe County Planning Commission.

Please forward all comments and questions to the County Land Use Administration Office at 986-6225.

All interested parties will be heard at the Public Hearing prior to the Hearing Office/Planning Commission taking action.

All comments, questions and objections to the proposal may be submitted to the County Land Use Administrator in writing to P.O. Box 275, Santa Fe, New Mexico 87504-0276; or presented in person at the hearing.

Published in the Santa Fe New Mexican on Wednesday, April 13, 2016.
