Case Manager Jose Larrañaga
NM

Dear Case Manager Larrañaga,

Re: CDRC Case Buena Vista Estates & Rockology Limited LLC

Please do NOT support a mining zone on La Bajada Mesa because this is part of the historic landmark that the New Mexico Heritage Preservation Alliance (NMHPA) has recognized as one of New Mexico's "Most Endangered Places."

In order to mine, they need water, largely to control the dust and air pollution that a strip mine would create.

The mining application proposes to use almost a million gallons of our increasingly scarce water per year for 25-years, while destroying an iconic landmark and diminishing the quality of life for all county residents and visitors.

Sincerely,

Ms. AniMaeChi drabic

The Honorable Kathy Holian
Board of County Commissioners
Commission District 4
P.O. Box 276
Santa Fe, New Mexico 87504-0276

31 January 2014

Dear Chairwoman Holian,

We write today regarding the pending application of Buena Vista Estates, Inc. and Rockology Limited, LLC to open and operate an aggregate mine on La Bajada Mesa. This letter may serve as notification of our strong opposition to the project as well as a request from us to the Board of County Commissioners to take swift and strong action to prevent serious and permanent harm from coming to this important area of the County and the State of New Mexico.

We understand that the applicants' propose to operate a basalt surface mine on a site that is initially planned to be fifty acres for a period of at least twenty-five years. Unfortunately, the site is one that lacks its own source of water, is along a narrow and aging road, and is highly visible from I-25. The visual impact can hardly be overstated, and the inevitable deleterious effect on the landscape (and the subsequent negative impact on tourism) can easily be imagined. Residents near to the mine are rightly concerned about the impact of dust, truck traffic, and noise on their lives. Road safety, already a serious problem in southern Santa Fe County, will be worsened by the new presence of large numbers of gravel trucks on the area's narrow roads.

The water situation in this area of the County is serious. We understand that the applicants have either abandoned or temporarily postponed their attempt to move water rights to the area from elsewhere and are now pursuing an effort to become customers of the County's water utility. Given the distance to the mine from the nearest County water hook-up and the large amounts of water that are required for a mine of this size, we think it unwise for the County

to provide water to this project. This is especially true in light of our recent successful effort to add the Penitentiary of New Mexico to the County's water utility and to have the Penitentiary stop pumping their old water wells.

The potential economic benefits of this project will be far outweighed by the costs. Under the applicants' own estimates, the project will send far less than \$100,000 to the County each year, an amount that will be easily surpassed in the event the County is required to upgrade roads, provide additional public safety coverage as a result of the project, or upgrade water utility infrastructure. Furthermore, the economic benefits have virtually no possibility of benefitting the communities that are immediately impacted by the project.

We request that the Board of County Commissioners initiate a process similar to the one initiated in 2007-08 to respond to the possibility of expanded oil and gas exploration in Santa Fe County. By imposing a moratorium for the purpose of adopting new sensible rules and regulations to protect public health, safety and welfare, the County will be taking a strong step in the right direction. There are a great many issues beyond the few mentioned in this letter that require serious consideration and debate. We hope that the Board of County Commissioner, with your leadership, will take appropriate action to protect the interests of all who will be impacted by this proposed mine.

Please do not hesitate to contact us if there is any way in which we may help you in this process.

Sincerely,

Representative Brian Egolf

Granting this abominable, speculative, extraction project permits and use of scarce water would be an act of insanity, and certainly would not in any way serve the residents of Santa Fe County or all of New Mexico. Let's see some intelligence and integrity on June 11! I'll be there, watching and listening. You can be certain each individual vote will be recorded and broadcast far and wide after the hearing. Think about which side you want to be on. Actions have consequences, and the consequences of approving this mine would be devastating to our community.

Be strong!

La Bajada Strip Mine Protest Letter

On June 11th, the CBC will decide whether or not to go forward with a proposed 50 acre gravel strip mine on the top of La Bajada near 1-25, fifteen miles south of Santa Fe, New Mexico. The proposed mine would defile this historic, cultural and scenic landmark for gravel when there is simply no need for another gravel mine. Current stockpiles of gravel and resources at existing mines far exceed demand. Mining requires water. In the midst of a record setting drought, the County has agreed to sell nearly 1,000,000 gallons per year of scarce, potable water for dust control. The County should not permit a new strip mine to mar La Bajada when other, more sensible options already exist.

RE: Rockology - La Bajada Mesa proposed mining zone ZMIN13-5360

This letter is in reference to the Rockology proposal to mine La Bajada Mesa. I believe the proposal is inconsistent with the stated visions of Santa Fe County, has the potential to result in cumulative impact to an historic landscape and the gateway to Santa Fe, and is inconsistent with the County's own adopted planning and development documents. The following supporting information is provided for consideration:

Sustainable Growth Management Plan: After a comprehensive and very public planning process, the Santa Fe County Commissioners adopted the 2010 Sustainable Growth Management Plan[1] (SGMP). Many issues, goals and policies of the document emphasize on the need to move away from piecemeal development and spot zoning such as the proposal before you. The plan stresses the need to shift to thoughtful place-related and -centered development with an emphasis on conservation and preservation, seeing the scenic landscapes and historic sites as important amenities in themselves. Preserving the county's special places is considered vital not only for those who live here, but also for substantial economic value gained from the area as a tourist destination for visitors from all over the world.

The document preamble states: "*The Santa Fe area is known worldwide for its special landscapes.*"[2]

Land Development Chapter 2 Key Issues: *"Mining, quarrying or extraction activities impact communities, roadways and scenic landscapes. Locations for resource extractive industries should not adversely impact existing communities, infrastructure and tourist economy."*^[3]

In Keys to Sustainability: *"Planning and development take into account the cumulative impact of individual development projects..."*^[4]

Future Land Use Objectives: notes the importance of developing Conservation Easements to preserve important landscapes, along with a photograph of one: it is an image of *La Bajada Mesa*^[5]. It would seem incongruous to use that landscape to illustrate conservation, then consider a spot rezone to destroy it.

Chapter 5 Resource Conservation Element Key Issues

"Development should be sited and designated to limit the impact on viewsapes that define the County as a tourist destination, such as near designated National Scenic Byways. In addition to its scenic qualities, historic, cultural and archaeological resources in Santa Fe County draw visitors to the area, making historic preservation a key element of the County's economy"^[6] I-25 cuts through La Bajada Mesa on its way to Santa Fe. La Bajada Mesa is also the scenic view from Highway 14 Turquoise Trail, as it crests the pass south of Madrid, on the way to Santa Fe.

"Scenic vistas and the natural landscape as viewed from the highways should be protected." Again, La Bajada Mesa is clearly visible from several highways.

"Site mineral extraction and related industrial activities well away from existing communities and scenic byways." La Bajada Mesa is the scenic view from Highway 14 Turquoise Trail after it crests the pass south of Madrid on its way to Santa Fe. It is also visible from surrounding areas to the south, north and east. The dust plume and lights would be visible from all directions.

"Lack of emphasis on gateways, rural highways, scenic routes and corridors." Under this key issue it is proposed that gateways and corridors are extremely important to the first impression of a place, and states that if these are ignored, the area may become less attractive to its residents and as a tourist destination. A spot rezone of a key gateway to an open pit strip mine might truly be considered as -- ignoring the importance of a gateway -- and have substantial negative economic impacts to the tourist industry. Map 5-2 Scenic and Historic Routes identifies the La Bajada area as the I-25 gateway to the greater Santa Fe area.^[7]

The Chapter includes a list of the county sites listed on the National Register of Historic Places, including La Bajada.

Key Chapter goals related to the project:

"Protect and preserve the County's archaeological, historic, cultural, community and scenic areas"^[8]

"Scenic viewsheds should be preserved and protected as an important resource"^[9]

"Limit development near prominent natural features such as distinctive rock and landforms"^[10]

"Protect night sky vies through prevention of light pollution"^[11]

The **Critical Findings** section of the Resource Conservation Element^[12] recommends:

"To preserve and enhance the unique heritage of the Santa Fe County, it is essential to preserve historic and cultural sites, landmarks and archaeological districts. Desecration or destruction of

these resources would result in an irreplaceable loss to the public of their scientific, educational, informational, or economic interest or value. Historic preservation aims to identify, preserve, and protect sites, buildings, and structures that have significant cultural, social, economic, political, archaeological, or architectural history. The social and cultural benefits to historic preservation are numerous, and since Santa Fe County's historic and cultural resources draw visitors to the area, preservation is also an element of the County's economy."

The 1996 Land Development Code^[13] Article XI Section 1.2 Location Standards for Creation of New Mining Zones provides for thoughtful discretion in the creation of a new mining zone i.e. *"may create new mining zones provided that..."* (bold added). *"Use of the land for mining use is reasonably compatible with other uses in the area affected by the mining use including but not limited to traditional patterns of land use, recreational uses, and present or planned population centers or urban and metropolitan areas. [14]"* (bold added). Also the area designated must be *"particularly suited for mining uses, in comparison with other areas of the County...."*

In other words, the Code states that the Commission is under no obligation to rezone this rural area to a strip mine for the benefit of a single applicant, rather than the broader goals of the County as a whole (i.e. *may create*, not *shall*.) And due consideration must be given to the effect of this proposal on other uses and activities, as well as due consideration to the suitability of the site for mining compared to other areas of the County.

Several earlier proposals to mine La Bajada Mesa were denied, or proposed to be denied because of their impact beyond the site of the proposal, including to nearby recreation. At the CRDC hearing for the current proposal, staff recommended approval. What has changed? Staff's current review saw none of the historic value, the sweeping landscape, tourism scenic value, rural residential communities and State Park that would be negatively affected by the visible mine pit, lights, machinery noise and blasting. The Code basis for review has not changed. Why would this time be different?

Given the provisions of the 1996 Development Code cited here, and the provisions of the SLDP cited above, it is this citizen's hope that the Commission consider the broader implications of the impact of this rezone decision, and deny the proposal. This historic site is at the gateway to the greater Santa Fe area -- a worldwide tourist destination for many reasons including the spectacular vistas and scenery, and it is adjacent to the Cerrillos Hills State Park which would overlook the project.

Subject: La Bajada Change of Zoning to allow Strip mining

To the commissioners:

I strongly urge you to vote "NO" on the proposed zoning changes to La Bajada. My arguments are detailed in the passage below, which has also been sent to the Santa Fe New Mexican for publication.

Allowing strip mining of La Bajada creates nothing of value and degrades our historic and archaeological landscape, the very essence of New Mexico's soul. So one must ask why this is even an issue. The question is...

Cui Bono? Who benefits?

Not the citizens of New Mexico. With only seven jobs and \$125,000 in gross tax receipts, it will not even register as a full drop in NM's economic bucket. The only economic benefit is to the owners of an unnecessary gravel mine.

Not the water table in our drought-stricken state when it is (conservatively) estimated to use 18 million gallons of water over its 25 years of operation. There is no plan for water for reclamation, and even if there were, given the amount of evaporation for dust mitigation, the possible amount of water reclaimed would be negligible. This is an unconscionable use of water when New Mexicans are being urged to give up watering their gardens and shorten showers to conserve our precious water.

Not the residents near the mine who will be subject to the sights and sounds of gravel mining operations 24 hours a day, with its attendant light pollution and air pollution from the mining operation as well as trucking exhaust fumes.

Not the tourists, for whom La Bajada Mesa is the entry to Northern New Mexico as well as a focal point for artists and writers all of whom support our economy in numbers that are vital to our state's bottom line. The mine is vital only to its owners' bottom line.

Not the gravel industry, which already has an abundance of mines, and for which this new mine would only create competition without increasing the customer base.

Who benefits? Clearly, the only beneficiaries of the proposed change of zoning would be the mine owners. Unless, of course, the board approves this change of zoning. Then the question will be, **who else benefited?**

To: Jose Larranaga
Subject: La Bajada Mesa

Dear Santa Fe County Commissioners and Mr. Larranga:

The mining application by Rockology/Buena Vista should not be approved for the following reasons:

La Bajada Mesa is an important part of New Mexico's history and culture that deserves to be protected, not crushed into gravel. In Spanish colonial times, La Bajada divided upper and lower New Mexico. The Camino Real de Tierra Adentro and the historic Route 66 pass through this area.

Today, La Bajada is recognized as the gateway to Santa Fe for visitors and a "We're home!" for residents. It is also the gateway to the acclaimed Cerrillos Hills State Park and the rest of the Galisteo Basin. The dust, noise, and visual impacts of mining operations and tailings piles would significantly diminish this experience.

Since the CDRC hearing, the original application has changed slightly. It now proposes to haul more than 18 million gallons of effluent water (rather than the originally proposed potable water) for dust control during its operation. But whether potable or not, Santa Fe's water has better uses than the facilitation of a venture that its citizens so overwhelmingly oppose.

The proposed mine site was zoned residential/agricultural when it was purchased. The County is under no obligation to change the zoning to allow this devastating mining use to occur.

Rezoning the area for mining renders adjacent lands on top of the mesa undesirable for less intrusive uses. Rezoning would establish a precedent to engulf more of the mesa in unsightly and destructive mining, which is likely the applicants' intent. Previous applications sought mining zones for up to two miles long on the mesa top and a current State Engineer application requests water rights to be applied for mining on a total of 5,217 acres.

The new Santa Fe County Sustainable Growth Management Plan moves La Bajada Mesa into an even less- intensive use category than is currently zoned today. By rushing to establish a mining zone before the new Code takes effect, the County's own plans and intentions would be subverted.

The proposed site is ecologically important, bordering important wildlife corridors and sitting within the Galisteo Watershed. The mine site itself is flanked by two drainages, with the Galisteo Creek below leading to the Rio Grande.

The ongoing noise from blasting, digging, grinding, and pulverizing the basalt cap into gravel would intrude on the pervading quiet of the Cerrillos Hills State Park, and on properties for dozens of miles around this proposed operation. Light pollution from security lights and night-time operations, along with dust from mining operations, would degrade the area's treasured dark skies and clear air.

Dust from mining activities would affect surrounding and downwind properties for miles for 25 years. This includes the highly-regarded Cerrillos Hills State Park, from whose planned gateway (Waldo Canyon Road) mining operations would be fully visible.

The costs of maintaining County, State, and Interstate roads from the pounding of mine and water trucks for 25 years would be paid by taxpayers for the private benefit of the applicants.

The benefits to the County are minimal while the risks to the local economy, built on rural beauty, history and tourism, are high. The application estimates only seven jobs and \$122,500 in annual gross receipts taxes. These estimates have been challenged as significantly overstated.

The County's own Sustainable Growth Management Plan recognizes that the future of Santa Fe County lies in sustainable growth. Keys to sustainable growth are film industry, the arts and tourism. Tourists don't come to see strip mines. This is not the impression we want visitors to have.

Sincerely- Ryan Touns
Resident of La Cienega

Subject: The fate of La Bajada is in your hands

Dear County Commissioners,

For the last few months I have been following the discussions in the news papers and at many public events in Santa Fe concerning the pending decision on an application to establish a major strip mining operation on the top of La Bajada.

Many excellent arguments were brought forward by concerned citizens, including the inappropriate use of large amounts of water (and it really does not matter if it is potable water or affluent, both are a precious resource to the citizens of Santa Fe) and the impact on the neighboring community due to noise, dust, and light pollution. Obviously you must weigh this against a potential financial benefit to the county through job creation and income from gross receipt taxes.

Without even questioning the numbers given by the proponents of the mine I would argue that this is a an insignificant financial gain compared to the losses of income this would generate. In the 30 years since I moved to Santa Fe I had many friends and colleagues from Europe visiting me, and everybody fell in love with the natural beauty of the land. Even today, when I return from Albuquerque either on I-25 or on Hwy 14 cresting on La Bajada or in the Ortiz I am stunned by the vistas. This is what attracted Georgia O'Keeffe and many of the artists that followed her, making Santa Fe to a Mecca for the arts world, with uncounted economical and emotional benefits to the communities in this area. And this is what attracts tourists from all over the US and from abroad to New Mexico still today. La Bajada has been the entrance portal to Santa Fe for hundreds of years, greeting visitors with the grandeur of the vistas it offers. Equally enticing is the trip across the Ortiz on portions of the historical Route 66. Both these views would be significantly impacted by the proposed mining operation.

If the welcome view coming to Santa Fe would suddenly become an industrial area full of dust, noise, and heavy trucks, visitors from all over the world would be shocked and the word would spread fast. This would potentially lead to Santa Fe losing its flair as one of the most desired travel locations in the Southwest and a dramatic reduction in hotel occupancy, restaurant patrons, customers for the many arts and craft shops, and general businesses, outweighing by far the 7 jobs supposedly created by the mine and the \$ 125,000 in projected gross receipt taxes.

The task handed to you by the voters in this county is to look for the economic wellbeing and gain of the communities, and thereby of its citizens. I trust you will take these arguments in serious considerations and ultimately will have no choice but agreeing with me and many of my fellow citizens that the only decision possible is to protect the historical values and the natural beauty of La Bajada Mesa.

I am looking forward to the discussions on June 11 and the decision you will reach in the favor of your constituents, the citizens of Santa Fe County.

Sincerely

Michael Holzscheiter

Subject: BCC Meeting

Mr. Larranga

I am working and will be unable to attend the meeting on June 11th concerning this matter. But I want to forward my concerns to you below.....

Thank you,
Alton Walpole

Dear Santa Fe County Commissioners and Mr. Larranga:

The mining application by Rockology/Buena Vista should not be approved for the following reasons:

La Bajada Mesa is an important part of New Mexico's history and culture that deserves to be protected, not crushed into gravel. In Spanish colonial times, La Bajada divided upper and lower New Mexico. The Camino Real de Tierra Adentro and the historic Route 66 pass through this area.

Today, La Bajada is recognized as the gateway to Santa Fe for visitors and a "We're home!" for residents. It is also the gateway to the acclaimed Cerrillos Hills State Park and the rest of the Galisteo Basin. The dust, noise, and visual impacts of mining operations and tailings piles would significantly diminish this experience.

Since the CDRC hearing, the original application has changed slightly. It now proposes to haul more than 18 million gallons of effluent water (rather than the originally proposed potable water) for dust control during its operation. But whether potable or not, Santa Fe's water has better uses than the facilitation of a venture that its citizens so overwhelmingly oppose.

The proposed mine site was zoned residential/agricultural when it was purchased. The County is under no obligation to change the zoning to allow this devastating mining use to occur.

Rezoning the area for mining renders adjacent lands on top of the mesa undesirable for less intrusive uses. Rezoning would establish a precedent to engulf more of the mesa in unsightly and destructive mining, which is likely the applicants' intent.

Previous applications sought mining zones for up to two miles long on the mesa top and a current State Engineer application requests water rights to be applied for mining on a total of 5,217 acres.

The new Santa Fe County Sustainable Growth Management Plan moves La Bajada Mesa into an even less- intensive use category than is currently zoned today. By rushing to establish a mining zone before the new Code takes effect, the County's own plans and intentions would be subverted.

The proposed site is ecologically important, bordering important wildlife corridors and sitting within the Galisteo Watershed. The mine site itself is flanked by two drainages, with the Galisteo Creek below leading to the Rio Grande.
!

The ongoing noise from blasting, digging, grinding, and pulverizing the basalt cap into gravel would intrude on the pervading quiet of the Cerrillos Hills State Park, and on properties for dozens of miles around this proposed operation. Light pollution from security lights and night-time operations, along with dust from mining operations, would degrade the area's treasured dark skies and clear air.

Dust from mining activities would affect surrounding and downwind properties for miles for 25 years. This includes the highly-regarded Cerrillos Hills State Park, from whose planned gateway (Waldo Canyon Road) mining operations would be fully visible.

The costs of maintaining County, State, and Interstate roads from the pounding of mine and water trucks for 25 years would be paid by taxpayers for the private benefit of the applicants.

The benefits to the County are minimal while the risks to the local economy, built on rural beauty, history and tourism, are high. The application estimates only seven jobs and \$122,500 in annual gross receipts taxes. These estimates have been challenged as significantly overstated.

The County's own Sustainable Growth Management Plan recognizes that the future of Santa Fe County lies in sustainable growth. Keys to sustainable growth are film industry, the arts and tourism. Tourists don't come to see strip mines. This is not the impression we want visitors to have.

Subject: STOP THIS MINING APPLICATION !

Dear Santa Fe County Commissioners and Mr. Larranga:

The mining application by Rockology/Buena Vista should not be approved for the following reasons:

La Bajada Mesa is an important part of New Mexico's history and culture that deserves to be protected, not crushed into gravel. In Spanish colonial times, La Bajada divided upper and lower New Mexico. The Camino Real de Tierra Adentro and the historic Route 66 pass through this area.

Today, La Bajada is recognized as the gateway to Santa Fe for visitors and a "We're home!" for residents. It is also the gateway to the acclaimed Cerrillos Hills State Park and the

rest of the Galisteo Basin. The dust, noise, and visual impacts of mining operations and tailings piles would significantly diminish this experience.

Since the CDRC hearing, the original application has changed slightly. It now proposes to haul more than 18 million gallons of effluent water (rather than the originally proposed potable water) for dust control during its operation. But whether potable or not, Santa Fe's water has better uses than the facilitation of a venture that its citizens so overwhelmingly oppose.

The proposed mine site was zoned residential/agricultural when it was purchased. The County is under no obligation to change the zoning to allow this devastating mining use to occur.

Rezoning the area for mining renders adjacent lands on top of the mesa undesirable for less intrusive uses. Rezoning would establish a precedent to engulf more of the mesa in unsightly and destructive mining, which is likely the applicants' intent. Previous applications sought mining zones for up to two miles long on the mesa top and a current State Engineer application requests water rights to be applied for mining on a total of 5,217 acres.

The new Santa Fe County Sustainable Growth Management Plan moves La Bajada Mesa into an even less- intensive use category than is currently zoned today. By rushing to establish a mining zone before the new Code takes effect, the County's own plans and intentions would be subverted.

The proposed site is ecologically important, bordering important wildlife corridors and sitting within the Galisteo Watershed. The mine site itself is flanked by two drainages, with the Galisteo Creek below leading to the Rio Grande.

The ongoing noise from blasting, digging, grinding, and pulverizing the basalt cap into gravel would intrude on the pervading quiet of the Cerrillos Hills State Park, and on properties for dozens of miles around this proposed operation. Light pollution from security lights and night-time operations, along with dust from mining operations, would degrade the area's treasured dark skies and clear air.

Dust from mining activities would affect surrounding and downwind properties for miles for 25 years. This includes the highly-regarded Cerrillos Hills State Park, from whose planned gateway (Waldo Canyon Road) mining operations would be fully visible.

The costs of maintaining County, State, and Interstate roads from the pounding of mine and water trucks for 25 years would be paid by taxpayers for the private benefit of the applicants.

The benefits to the County are minimal while the risks to the local economy, built on rural beauty, history and tourism, are high. The application estimates only seven jobs and \$122,500 in annual gross receipts taxes. These estimates have been challenged as significantly overstated.

The County's own Sustainable Growth Management Plan recognizes that the future of Santa Fe County lies in sustainable growth. Keys to sustainable growth are film industry, the arts and tourism. Tourists don't come to see strip mines. This is not the impression we want visitors to have.

AS TEN YEAR RESIDENTS OF SANTA FE COUNTY WE WOULD LIKE TO SEE THE LA BAJADA MESA , NATIONAL MONUMENT APPLICATION MOVED FORWARD, A MUCH BETTER USE FOR THE COUNTY.

SINCERELY,

LOUIS BIXENMAN & G. STERLING ZINSMEYER, 36 VEREDA SERENA, SANTA FE, NM 87508, TEL 505-438-0279

Subject: CDRC Case Buena Vista Estates & Rockology Limited LLC

Dear County Commissioners

I'm writing to request that you please DENY the re-zoning request for mining La Bajada Mesa.

Please do everything you can to PRESERVE La Bajada Mesa.

The public would receive LITTLE to NO BENEFIT from this mining, but instead would suffer from the negative impacts of mining activities for years, loss of water (potable or effluent, water is water in a drought-ridden state), plus lose forever this landscape which has important historic and cultural significance. Not to mention the loss of wildlife habitat, and more of what draws visitors to our state--the beautiful, wide open, unspoiled landscapes. The drawbacks of this plan to the public and the state far outweigh any purported benefits.

The only beneficiaries of this ill-conceived plan would be the property owners and the mining company. They will draw all the economic benefit and then leave us with a devastated landscape that can never be restored.

In this day of diminishing resources and dwindling open space, let us work together to preserve what we have. La Bajada Mesa is much more valuable to New Mexico left as it is for all of us to enjoy in perpetuity. This type of open space is invaluable and once exploited, is gone forever.

Thank you
Joan Stigliani
PO Box 27142
Albuquerque NM 87125

The proposed 50 acre mining zone is within the Galisteo Creek watershed, an area of concern due to soil erosion the proposed project would increase within the watershed. La Bajada Mesa exists as a Mesa, as opposed to part of the sandy basin that surrounds it, due to the basalt flow that caps the underlying, unconsolidated sediments of the Santa Fe Group (Dethier et al., 2006; Sawyer et al., 2006). This basalt cap, proposed to be removed, prevents erosion of the mesa.

The Watershed Restoration Action Strategy for the Galisteo Creek watershed, funded primarily by grants from the Surface Water Quality Bureau of the New Mexico Environment Department and authorized by Clean Water Act, Section 319h, lists soil erosion and runoff control as the second restoration priority, only after community involvement. They report that soil loss within the watershed is occurring faster than soil accumulation, leading to reductions and changes in agricultural productivity and natural flora abundance, as well as an increase in the sediment load to Galisteo Creek. Soil loss also affects the clarity and quality of water, an effect which will carry to the Rio Grande.

In December 2012, the U.S. Department of Interior Bureau of Land Management prepared an Environmental Assessment for the Galisteo Basin Archaeological Sites Protection Act General Management Plan (Report #: DOI-BLM-NM-F020-2012-0030-EA). The plan includes 24 historical sites, surrounding the proposed mining zone and identifies that "soil erosion is a key concern in the greater Galisteo Basin because of the highly erodible nature of the soils in the area." Also included in the report are 19 species that reside within the Galisteo Basin which are currently listed as threatened, endangered, proposed, candidate, or a species of concern by either the U.S. Fish and Wildlife Service or the State of New Mexico.

The purported economic gain for Santa Fe County from increased Gross Receipts Tax, even if accurate, will likely be exceeded by the cost of restoration that will be needed due to the increase in soil erosion and resulting sediment load from the proposed mining zone, which resides less than 1500 feet from the edge of the escarpment and the Galisteo Creek, which is a tributary to the Rio Grande. The construction materials extraction report dedicates two complete sentences to soils, which include two typos, and an inadequate description of three soil types, all totaling less than one page of the report.

John Wesley Powell, a great explorer of the American West, argued that water is the key to development and success in this land. Land management should be organized around watersheds. Our watersheds are the most valuable resource for prosperity and sustainability into the future, and it is of great concern to the people if land management decisions do not consider this resource first. Hundreds of professionals, students and community volunteers have dedicated time to the Galisteo watershed; their efforts should not be undermined by a short-term benefits operation, such as the proposed mining zone on La Bajada Mesa. The proposed project is not economically or culturally worth the long term environmental damages.

Re: BCC HEARING, June 11th 2014. CDRC CASE # Z/DMXT 13-5360, Buena Vista/Rockology mine application

The CDRC has recommended, by a 5-2 vote, that the BCC deny the referenced application. I strongly urge the BCC to heed that advice and use its discretionary authority to protect La Bajada Mesa.

The current Rockology mining proposal is very nearly identical to two previous instances (2005 and 2008), from the same applicants under different corporate identities. In my professional judgment (as a licensed NM landscape architect and UNM researcher and teacher in this subject area) I found that those applications failed to address critical issues of public health and safety including dust control, water supply, stormwater management, and revegetation. In addition, those applications ignored the historic, cultural, and ecological value of the site, values recognized in County long-term planning over the past decade or more. Furthermore, those earlier applications gave misleading emphasis to questionable economic analysis. The County staff and citizens raised enough objections on both previous occasions that the applications were rejected or withdrawn.

The current application is effectively identical in its defects to the 2005 and 2008 versions. It differs primarily in reducing the footprint of the mine, while also making it abundantly clear that this would be just Phase One of an expanding operation that would ultimately be exactly as large as the first application, which requested permission to strip over two miles of the mesa. While telling the County they only want to mine 50 acres, the applicants have been advertising on the international market to sell 5200 acres of "aggregate for possible mining." This is clear evidence of bad faith, in my opinion.

The current application also differs in proposing to use treated water (both City-treated effluent and County-treated potable water) to avoid the rightful jurisdiction of the State Engineer over issues of water rights, especially at this scale. Neither of these purchased sources of water can meet the County code requirement to prove adequate water supply. Treated effluent is already over-committed by 140%, according to the City's own documentation. To supply this or any other new applicant, more appropriate existing users, such as public parks, would have to be cut. Effluent cannot guarantee an adequate source of water now, let alone over the proposed mine's 25 year operation. The purchase of potable water from the County similarly offers no guarantee of adequate long-term supply.

The applicant is doing the regional water-supply no favor by switching from one form of treated water to another. Effluent is an increasingly valuable resource, in decreasing supply. It currently keeps many public recreation facilities from drying up. By the City's own estimate, it will be unavoidable to use effluent, with secondary and tertiary treatment, as a future source of potable water, already a common practice in many larger cities. Thus, using either effluent or potable water for inappropriate, unnecessary and undesirable projects such as the proposed mine is a threat to current and future water supply for critical uses. Permitting either one sets a terrible precedent -- that anyone with money can drain our water sources without limits on amount, duration, or purpose.

Details of the inadequacies and concerns with the current and previous proposals are documented in the letter submitted by the Rural Conservation Alliance, signed by Ross Lockridge on behalf of the RCA. I am a signatory to that document; in my professional opinion it is accurate and even understated in pointing out the serious problems with Buena Vista/Rockology and their application.

As a county resident and as a land-use and sustainable construction expert, I strongly urge the Board of Commissioners to deny this proposal on June 11th because:

1) La Bajada Mesa is a cultural and historic treasure -- often overlooked as we sail up I-25 or the Railrunner. It has sacred sites connected to the long history of the Pueblos. It was the last challenge on the Camino Real from Mexico City. On its face, a segment of old Route 66 can still be hiked. For Santa Fe residents, it is the threshold that tells us we're home. It is worth far more to us as a landmark than as road-base.

2) The proposal asserts a "need" for a new gravel mine. Apparently based on dreams of a captive gravel market during Railrunner construction, this need is entirely private, and mostly imaginary. Within Santa Fe County, we already have Caja del Rio Quarry producing these products, with decades of reserves. The CdR excavations are reused by the landfill where it is located. Permitting a new mine would undercut the CdR operation, cancelling out economic benefits. Even proponents estimate only seven new jobs; good pay or preferential local hiring are not assured. Besides, demand for virgin gravel is decreasing; construction is slow, and recycling old roads by crushing them for aggregate is increasingly cost-effective. Statistics from the State of NM show that gravel production in Santa Fe County has exceeded supply in recent years.

3) La Bajada provides regional "environmental services." Its geology influences surface and subsurface water: the Santa Fe River and La Cienega springs support traditional agriculture, and La Bajada pushes groundwater into Rio Grande Basin aquifers, which supply water to over 50% of New Mexico's population. The Rio Grande valley, which La Bajada helps define, is one of the top twenty wildlife and migratory bird corridors in the US. And as you know if you've driven up from Albuquerque with the top down, La Bajada buffers local climate by about ten degrees -- an increasingly important function.

4) Last but far from least, the water supply concerns noted above are critical. One has only to look at drought-stricken areas in Texas, where livestock and crops dies of thirst while fracking operations hoarded water, to see that we cannot set a precedent of allowing money to determine who gets water in this region.

In addition to these major areas of concern, the present application is rife with inaccuracies, unsupported assertions, and outright misstatements, all of which conveniently distort the facts in a way that would be favorable to the applicants. Not only are the facts which are addressed mis-represented, but there are a significant number of procedural requirements that have not been addressed at all. These are not minor technicalities, but critical matters such as dust control, accurate traffic impact and infrastructure costs that the applicant expects to foist onto County taxpayers, stormwater compliance with the National Pollutant Discharge Elimination (NPDES) statutes, and requirements under the same statute for revegetation.

Far from being procedural oversights, these form a pattern of indifference to public health and safety issues, which are the basis for the County's mandate to enforce appropriate land-use. These inaccuracies and incomplete documentation are, by themselves, more than enough reason that the application must be rejected.

Subject: La Bajada Mesa-Buena Vista Estates & Rockology Limited LLC

To Whom It May Concern:

I live in the area currently, that would be adversely affected if the application is approved for Rockology to destroy the way of life that we currently enjoy, in this neighborhood.

I specifically moved here because it was quiet. I sat on the land before I bought it for a long time and monitored the sound levels very carefully before choosing this piece of land.

I have been a resident of Santa Fe county in various locations for over 40 years. I lived and later looked for a quiet location specifically. I bought the land that I currently reside on over 22 years ago. I have watched this neighborhood grow and even with the growth it still maintains the quiet rural setting, that would be destroyed if this change was allowed to happen. I can hear the train run many miles from my house, but it's way in the distance and is tolerable and I knew about it when I bought this land.

If there were to be blasting and lights on in the distance, I would love to be able to sell my house (if I could figure out where to go next). Unfortunately next to nothing is selling in the area because the possibility of the nature of the area changing is so detrimental to sales and the value of property in the area. I live in one of the only areas that is a subdivision so close to the contended property.

I know that it is a very visible location. Which means the sound and wind, destruction will be seen far and wide. When I exit I-25 and pass the Visitors Center, the tourists (which we desperately need to keep our economy alive) would have that as the first impression that they see as they rise up to the Mesa after the long climb. Imagine arriving from the airport and having to drive, probably exhausted from the trip. You stop at the Visitor Center and are immediately greeted by booms, ugly lighting, blowing dust, etc. This is not a place you want to go on vacation. In fact it may resemble or be worse than where you came from. This is very bad for our economy which depends so heavily on tourism to survive. Not to mention the movie industry.

There you are in the middle of trying to create a finely crafted acting/setting scene and BOOM- it just blows the whole magic moment. I don't think the directors would like that and would consider coming here with that possibility to increase their film costs. We currently have many TV and film productions (even a facility specially built) and would be devastated if we lost an industry which we worked so hard to build up. Even educated the students to work in. That means we lose that revenue and the people have to leave to get jobs elsewhere. Films are good clean industry, so is tourism.

This gravel is not needed and the proposed water source is not secure enough on a steady basis. There is no need but greed for this gravel mine to be developed.

You are our elected officials and I hope that you consider your constituents votes in this matter. We will be here, long after Rockology sells to some international buyer. Those 7 supposed jobs are nothing compared to all the votes you will lose if you approve them.

We live here and we are a community.

Don't destroy what has taken so long to create.

Sincerely,

Gail Karr

Re: CDRC CASE # ZMIN 13-5360 Buena Vista Estates, Inc. and Rockology LLC Application to mine La Bajada Mesa—Reasons for our opposition to this application.

Dear Commissioner Anaya, Commissioner Chavez, Commissioner Holian, Commissioner Mayfield, and Commissioner Stefanics,

The following letter highlights a number of concerns related to the creation of a new mining zone on La Bajada Mesa. This letter is similar to a prior letter submitted to the CDRC but has been updated to reflect new concerns and developments since that hearing.

The Rural Conservation Alliance (RCA) is an unincorporated association of community organizations and individuals dedicated to the preservation and protection of the natural resources and rural character of the Galisteo Basin area of Santa Fe County, New Mexico.

We request that the Board of County Commissioners deny the 2013 Buena Vista /Rockology application to create a new mining zone on a significant New Mexico cultural landscape, for many of the same reasonable and legal rationales that Staff recommended denial of the applicant's two previous applications in 2005 and 2008. In addition to the reasons for denial that Staff recognized in the prior applications, we believe that this application should also be denied based on:

- Inadequate water budgeted for mining operations and dust control
- Lack of evidence of long-term sustained water availability
- An irresponsible use of water that sets inappropriate precedents for the future
- Incompatibility with other land uses
- Negative economic impact for the County
- Degradation of important ecological and wildlife areas
- Threats to the health and welfare of County residents
- Application deficiencies, and inaccurate, incomplete or misleading statements

The following report addresses these issues in detail. We urge the County of Santa Fe to carefully consider these issues and to deny the application to strip mine this precious natural, historic and cultural resource.

Rationale for Prior Denials Remains Unchanged

County Staff recommends denial, 2005

When a 108 acre site was requested in approximately the same location as the current application, the New Mexican reported that Case Planer Dominic Gonzalez's memorandum advised, "this location is not compatible or suitable for mining" and that the "1,060-acre tract . . . is too close to the county's Cerrillos Hills Historic Park [previous name] and to Buffalo Head Mountain." The article noted that both La Bajada Mesa and Buffalo Mountain are recognized by the New Mexico Heritage Preservation Alliance as being among the state's Most Endangered Places. This memo is evidently missing from the County case file. However, a copy of the draft, dated 9/18/2005, with the language as quoted, is located in the Appendix, pp. 20-27.

County Staff recommends denial, 2008

When an "initial" 50 acre mine zone was requested in exactly the same location as the current application, Staff again recommended denial, stating: "[W]hen considering the criteria set forth in Article XI, Section 1.2.2 the proposed location is not reasonably compatible with the area and is not particularly suitable for mining as required by Article XI, Section 1.2.4." [Emphasis in original] And: "The reclamation needs associated with a project of this magnitude, landscaping needed to buffer the visibility of the project, and water required for long-term dust control requires a sustainable water supply..." "[S]taff does not support the use of trucked in water".

Water Issues

Unsupported Estimates of Water Usage

The applicant has provided no support for their calculation that 2.19 acre feet per year (713,615 gallons) would be sufficient for dust suppression. As Mining Engineer Jim Kuipers has written, "Under moderate duty approximately 20 gpm [gallons per minute] would be consumed per crusher and associated drop points (e.g., conveyor transfer points). Depending on the spray system, material properties, wind, shrouding and other factors this can be as low as 10 gpm and as high as 50 gpm or more." In dry, windy conditions this could be even more, and the mesa top is notoriously windy.

The application's statement of 5 crushers and 4 screeners implies that two systems will be in operation. If we assume that these are used 40 hours per week, then the actual water required is shown in the following table:

	Usage rate	Gal / min	Gal/ year *	Applicant's estimate	Discrepancy in Gal
One system	low	10	1,248,000	713,614	534,386
	high	50	6,240,000	same	5,526,386
Two systems	low	10	2,496,000	same	1,782,386
	high	50	12,480,000	same	11,766,386

Gal/year per system = Gal/min x 60 min/hr x 40 hrs/week x 52 weeks/year.

Even under the most conservative estimates (10 gallons per minute, 40 hours per week excellent shrouding, and for one system), falls short of engineer Kuiper's calculations by over a half-million gallons, requiring 75% more water than estimated in the application. Two systems (as implied by the quantity of equipment listed) will use **three times more water than stated in the application.**

In addition, there is no estimate for other ancillary needs for water. For example, dust control of dry, disturbed soil at the mine site, or the water required to establish vegetation to reclaim a wind-scoured and deeply pitted mesa. The applicant's estimates are merely the water requirements for the crushing equipment alone.

Implications of Providing Government-subsidized Treated Water for Industrial Mining Operations

The original application stated that water for mining operations would be provided by the County potable water dispensary on NM 14. The water at this dispensary has been acquired and treated at public expense, and the mining operation has absolutely no need for water meeting drinking standards. Were the County to provide unlimited quantities of drinking water for industrial mining operations, it would establish a poorly-considered precedent. In the future, any industrial applicant could demand a similar accommodation.

The agreement to purchase potable water itself is problematic. The County acknowledges that "...this project is outside of our service area." The "willing and able" letters to provide bulk water services were signed by an Accountant and affirmed by an Engineering Associate. There is no indication that there was any substantive analysis of this request or its implications. The letter is unconditional; There is no acknowledgement of the mine's 25 year timeline, nor limits, such as in times of drought when water shortages could demand that scarce water resources be reserved for higher priority uses such as the household requirements of residents.

To the best of our knowledge, the applicants have not terminated the agreement that would enable them to purchase this potable water from the County. However, since the CDRC hearing, the applicant has also entered into a similar arrangement with the City to purchase treated effluent water. That agreement also lacks any guarantee of supply, lacks any mention of the 25 year operational time frame stipulated in the application, and specifically notes that there will be times when water is not available.

It is no better to squander treated effluent water on unwanted mining operations than it is to waste treated potable water for that purpose. Treated effluent is an increasingly valuable – and increasingly scarce – resource for Santa Fe. This water is currently treated at city expense, then used to irrigate parks and golf courses, water livestock, and support construction activities, as required by the city's water conservation ordinances. While these uses help to offset demand for potable water, they already strain the available supply of treated effluent.

The city's Reclaimed Wastewater Resource Plan (April 2013) highlights the challenge. "Reclaimed wastewater (RW) is a vital and valuable water resource that helps the City of Santa Fe meet its current water supply needs; it can also play a critical role in meeting future potable

water supply demand.” However, the report goes on to say, “The combined monthly demand...is 40% more than the RW available. Hence, RW demand is greater than the available supply under current average conditions, which will only worsen under drier hotter drought and projected climate change-impacted conditions.” Further, the City of Santa Fe Wastewater Management Division (WWMD) “does not currently have a protocol or a list of priorities by which the RW users receive RW under shortage scenarios during critical summer months.”

The implications of this are staggering. If this application were permitted to proceed, it would mean that Santa Fe home builders would be competing with an industrial mining operation to secure the treated effluent that city ordinance requires them to use. If mine operators simply got to the standpipe first, they would be permitted to drain the available supply and leave other users empty-handed. Clearly, an open-ended agreement to provide reclaimed wastewater for this operation is hardly a solution to the problem at hand.

Further, the Requirements of the County Code are clear and the applicants have not met those requirements. Article XI, Section 1.7, Reviews for Mining Uses, requires that the “applicant shall submit evidence that the applicant has obtained an adequate water supply as evidenced by appropriate permits issued by the State Engineer’s Office/Interstate State Stream Commission of the State of New Mexico.” The applicants have not done this. Instead, they have provided evidence of non-guaranteed supplies of City- and County-subsidized, treated water for their commercial mining operations. The code does not allow for this alternative provision, nor would it be in the best interest of the citizens of Santa Fe.

Application Deficiencies

Location Standards for Article XI, Section 1.2 Have Not Been Met

Article XI, Section 1.2 requires the applicant to demonstrate evidence that the proposal meets four criteria. The application adequately addresses only the first of these, 1.2.1, and even on that criterion questions remain. Article XI requires that all four criteria be met.

1.2.1 Evidence of significant mineral resources.

The application presents statements about the presence of basalt that would be crushed into aggregate. The methodology only evaluated to a depth of 20 feet, while the applicants plan to mine to a depth of 60 feet.

In addition, the applicant claims, without substantiation, that the “quality of the aggregate pits in the Santa Fe area generally does not meet the requirements for these types of construction projects” (p.1 of application). Nor do they offer any evidence that the basalt they propose to mine is itself suited to meet those requirements. In fact, the application states that the specific gravity the basalt they would be mining (2.64) to be less dense than typical ranges for basalt (2.8-3.0)¹.

1.2.2 Mining use is reasonably compatible with existing uses

Mining use of this land is diametrically opposed to and incompatible with historical, cultural and recreational uses. Among those are the historical and cultural significance of the site and the area’s status as a gateway to both Santa Fe and to the Galisteo Basin parklands. Published comments by two historians characterize the mesa this way:

“La Bajada Mesa in northern New Mexico contains cultural, historical, environmental, and scenic features of considerable significance, all worthy of permanent preservation.”
--Marc Simmons, Ph.D. (U.N.M., ret.), July 4, 2012.

“There is no more important geographical landmark of our state, and none with more historical significance.” --William Baxter, Sept. 4, 2005.

In 2003, the New Mexico Heritage Preservation Alliance ranked La Bajada Mesa as one of its Most Endangered Places, a list which has included such landmarks as Chaco Canyon and El Morro National Monument.

The Camino Real de Tierra Adentro National Historic Trail is part of the historic Spanish colonial route that linked Mexico City to Santa Fe and beyond. La Bajada Mesa gives context to this Historic Trail. One of the best preserved remnants of this federally-designated National Historic Trail is located on land directly adjacent to the proposed mine site. Analysis shows that a SE branch of this historic trail, the Juana Lopez segment, passes directly within view of the proposed 50 acre pit.(Appendix, Figure 2)

¹ <http://www.edumine.com/xtoolkit/tables/setables.htm>

"A portion of the newly federal-designated Camino Real de Tierra Adentro National Historic Trail either passes directly over land within the mining project or over adjacent lands. The escarpment itself has a long history associated with early travel, and the massive earth removal, as proposed, threatens to seriously compromise not only the viewscape from Interstate 25, but also the cultural and natural integrity of the La Bajada feature." --*Historian, Marc Simmons, Ph.D, Nov. 12, 2002*

Despite the applicant's attempt to paint a picture of an area rampant with mining, the proposed mining zone is *not* located in an established mining zone but is adjacent to the historic Cerrillos Mining District, a NM State Cultural Property. The historic 1880s "Cerrillos Mining District" (CMD) was placed on the State Register of Cultural Properties in 1973. It is NOT a mining zone and has no legal status as such. See "*Historic CMD, A New Mexico 'Cultural Property'--not a mine zone*" at <http://www.raintreecountv.com/CMD.html>

Mining in this location is incompatible with the historical, cultural and recreational uses of both the Mesa itself and of the adjoining areas. As such, the application can and should be denied under Article XI, 1.2.2. This was part of the rationale for denial in 2008 and it remains unchanged today.

1.2.3 History of significant mining in the area

There is no significant history of mining on this area of La Bajada. Permitting this application would entail the creation of a completely new mining zone in an area that lacks a history of mining. While legally possible under The Land Development Code, the applicants have no protected right to demand such a zoning change, and such a zone is, as stated previously, incompatible with both surrounding land uses and with virtually all strategic visions produced by the County in its long-term planning.

1.2.4 Particularly suited for mining uses compared to other areas

This area is particularly *not* suited for mining, as discussed above under 1.2.2. Further, basalt is the most common mineral on the planet² and La Bajada Mesa is simply the southern-most tip of a massive basalt deposit that stretches for miles (Appendix, Figure 5).

Moreover, there are many other areas far more suitable for mining basalt-based aggregate. In particular, the Caja Del Rio mine (currently operated by Delhur Industries) already produces basalt gravel within the County. That quarry uses piped (not truck-hauled) effluent water, is well-situated near the county landfill, and its mining cavities can be filled with county refuse. According to its manager, (See A. Murray letter, 1/15/2014) this quarry contains approximately 3.5 million cubic yards of basalt or a projected ten-year supply.

There simply is no need for additional production of gravel. Figures from the New Mexico Department of Energy, Minerals Natural Resources show that Santa Fe County alone produced an oversupply of more than 107,000 tons of gravel and base course over the past five years. It is worth noting that these over-production figures do not include the additional production and stockpiles at the Caja de Rio quarry.

² Particle Toxicology, Donaldson & Borm, eds., CRC Press, Boca Raton, 2006, p. 23

These figures contradict Buena Vista's unsupported claim that a shortage of aggregate sources in the area necessitates aggregate being “hailed in [to the Santa Fe area] from outlying sources to meet market demand”. If materials are being hauled in from elsewhere, it is likely a price consideration rather than one of availability.

Slow construction across all sectors since 2008 has decreased demand for aggregate and related materials, and demand is likely to remain depressed for several more years. Industry estimates often still use figures from before 2008, over-stating demand. In addition, mobile on-site crushing and recycling of old road surfacing for use as new aggregate is becoming an increasingly widespread and economically viable practice, especially as it reduces the volume of demolition rubble – a concern for Santa Fe County like all other landfill operators. (See recycledaggregateproducts.com for a nearby example.) Such concrete recycling further reduces demand for new-mined aggregate, and is likely to continue to do so in the foreseeable future. Even if a need for basalt gravel were to arise in the future, there far less problematic areas throughout the County to locate such a mine, as evidenced by the geologic map in Appendix Figure 5.

Application Lacks a Visibility Study

The application, at this writing, lacks a credible study of the visual impact of the mining operations, including equipment, piles of material, dust, and lights. Applicants' claims that they put banners on the top of 20-foot poles hardly reflect the impact of piles of gravel or large mining equipment. Our analysis shows that these items as well as dust plumes will be readily visible along most of I-25 headed toward Santa Fe, contrary to the Applicants' claims. They will be fully visible to ground level for travelers headed toward Albuquerque.

Visibility is of critical importance because of its impacts on Santa Fe's existing economic bases of tourism, the arts, real estate, film-making, and on air quality regularly listed as among the nation's highest. Dust has impacts on visibility and health, night and day.

Visibility from Waldo Canyon Road, the Turquoise Trail National Scenic Byway, and locations to the south of the mesa must be assessed along with views from I-25, the Railrunner, and the SE branch of the Camino Real de Tierra Adentro. Each of these, except Waldo Canyon Road and the Camino Real, is a major gateway for any of the 5 million or more Albuquerque airline passengers annually who visit Santa Fe, as well as motorists not arriving by air.³ Waldo Canyon Road is designated to be the gateway to the acclaimed Cerrillos Hills State Park and the Galisteo Parklands.

Application Lacks a Blasting Impact Study

The application lacks any site-specific study on blasting but simply includes a brochure from the blasting subcontractor. There is no consideration or analysis of site-specific impacts of noise upon neighboring uses or wildlife, for whom this area is an important migration corridor. The Sustainable Growth Management Plan (SGMP) displays “Conceptual Major Wildlife Corridors” provided by NM Game & Fish Dept. that show the area of Applicant's site surrounded by the

³ See <http://nmindustrypartners.org/wp-content/uploads/2011/09/NMTD-Quarterly-Report-January-2012.pdf>

corridors.⁴ In addition, the upper Rio Grande watershed area including the Galisteo Basin and La Bajada is designated by Wildlands Network as one of the twenty most important wildlife linkages on the North American continent. (Appendix, Figure 1) This impact study should also include consideration of the detrimental effects that noise pollution and dust would have on tourism and park visitation.

Reclamation Plan is Insubstantial

The reclamation plan refers only to 4-6 inches of topsoil to be put aside in stockpiles, much of which will have been lost over the years to wind. As the archeological survey notes, "in some places the soils are eroding away, revealing cobbly basalt intrusions through the thin surface soils". Elsewhere in this report it is noted that "the location is exposed to scouring winds blowing across La Bajada Mesa." (Appendix, Figure 6)

The application states that "Finished stockpile material will be located in an area that is protected as much as possible from the prevailing winds." This is entirely unrealistic and inadequate. There simply is no such protected place where stockpiles could be protected from the scouring winds that blow from every direction across the exposed mesa. The plans to use retention blankets on the seeded areas does not apply to stockpiles. Even if the pile(s) were eventually placed in the pit, the wind would be drawn through the pit carrying the topsoil dust with them.

The amount of topsoil needed for reclamation is not addressed. There is no assessment of what amount might be sufficient for reseeding. But in any estimation, the small amount of topsoil put aside seems woefully insufficient to the task at hand and draws into question the probable success of reclaiming a 60' deep mine site.

Best practices in the landscape construction industry⁵ discourage soil stockpiling for more than one month; piles must be no deeper than four feet, covered, and kept moist. Soil is a living material, and the microbes that give it the ability to support vegetation and retain water and nutrients die if these guidelines are not followed. The application does not take any of these issues into account. It is highly unlikely that the applicant would follow these guidelines, nor could do so without additional water and other investments. As such, stockpiling is offered as a gesture, but would fail to protect the site. In fact, it would increase dust problems when incorrectly attempted.

Erosion Is Not Adequately Addressed

The question of erosion also needs critical consideration. The application says on p.15 that a "borrow ditch will be cut on each side of the road to manage storm water." With only 4 to 6 inches depth to basalt surface, borrow ditches would either be inadequate for the volume of runoff, or would have to be blasted from rock. Inadequate stormwater management would create serious problems on and off the mine site, potentially including siltation increases in the Galisteo Creek and Rio Grande. Erosion and Sedimentation control is required by Federal law (NPDES) for every site over 1 acre in size.

⁴ 2010 Santa Fe County Growth Management Plan, p. 51

⁵ Thompson & Sorvig, Sustainable Landscape Construction, 2nd Edition, 2007, Island Press; p 88.

Further, the proposed mine site sits within the Galisteo watershed and is flanked by two drainages to the Galisteo Creek, below. Since the Galisteo is a "Waters of the United States," industrial mining activity within the watershed directly above the creek may be of concern to the Army Corps of Engineers, yet that agency has not been consulted.

Application Lacks a Dust Mitigation Plan

Fugitive dust is a particular issue in the proposed area but no mitigation plan has been presented.

Dust from basalt crushing is associated with lung disease. One study found "basalt pneumoconiosis," a lung disease similar to those caused by asbestos or silica, in 27% of basalt mine crusher workers.⁶

Increased airborne silica dust is also a concern. According to OSHA, "crystalline silica has been classified as a human lung carcinogen. Additionally, breathing crystalline silica dust can cause silicosis, which in severe cases can be disabling, or even fatal. The respirable silica dust enters the lungs and causes the formation of scar tissue, thus reducing the lungs' ability to take in oxygen. There is no cure for silicosis. Since silicosis affects lung function, it makes one more susceptible to lung infections like tuberculosis."

Further, the potential traffic hazards of dust storms created or exacerbated by 50 acres of disturbed soil in proximity to Interstate 25 have not been evaluated. The hazards of dust storms are not a theoretical concern. As recently as May 22, 2014, six people died in collisions due to a severe dust storm on Interstate 10⁷.

Dust production in this dry, windy, exposed location is a public health hazard and safety hazard. The County has an obligation to require substantial dust mitigation measures that will protect the health of its residents.

Economics

Questionable Economic Benefits

Under Economic Benefits, the application assumes it will sell 250,000 tons of material annually, and generate \$122,500 in gross receipts tax. Yet later, on p.11 of the application, it states, "886 thousand cubic yards will be exported from the site and sold on the open market." Since only retail sales at the mine would be taxable, the county would not recognize the benefits originally stated. Further, under a later section in this letter entitled Operation Plan/Time Frame, we will show that the application's production figures themselves do not add up, further diminishing the County's prospects of realizing any significant economic benefit from the proposed mine.

Within today's aggregate industry, "local" can easily encompass several counties. When NMDOT needed base course for a Turquoise Trail reconstruction project (Madrid to Lone Butte), it came from outside of Santa Fe County. That was because Lafarge North America

⁶ Particle Toxicology, Donaldson & Borm, eds., CRC Press, Boca Raton, 2006, p. 23

⁷ Reported 5/22/14, Santa Fe New Mexican, http://www.santafenewmexican.com/news/local_news/police-dead-in-new-mexico-interstate-crash/article_bc345270-831a-56b5-8cbc-19b3819e0769.html

underbid others, including the Waldo Quarry, located 2 miles ESE of the applicant's proposed site. Evidently the Lafarge source was local enough for NMDOT. The applicant's implication that "local" sources would reduce costs for County Public Works and for contractors is unfounded, since out-of-county and even out-of-state suppliers, whose costs include more transport, are regularly able to underbid local sources.

Other mines on Buena Vista's list reinforce the point that another aggregate mine in this location is not needed, as do the excess production figures noted earlier.

Since the applicant has not clearly established the need, or economic demand for another quarry, the application's "Economic Benefits" (p. 2) become questionable. Another mine in an oversupplied market would simply undercut the business of existing mines and, as a result, contribute little economic benefit to the State and County. The same applies to jobs, with those lost at existing operations canceling out the already small number of estimated jobs created by a new mine in an oversupplied market.

Negative Impact on Neighboring, Sustainable Economic Activities

Siting a mine in as prominent a location as La Bajada Mesa threatens the local tourist industry and the Cerrillos Hills State Park. The 2006 "Cerrillos Hills/Galisteo Basin State Parks Feasibility Study" indicates that "the best access [to the Cerrillos Hills State Park] would be from the I-25 corridor", i.e. via Waldo Canyon Road. This new and growing sustainable parkland resource needs to be protected and nourished, not burdened with a strip mine on its gateway access road.

In addition, the arts economy, film-making, and property value and tax base all derive from a quality environment. Real estate with clear air and vistas are essential parts of the Santa Fe economy which would be diminished by a large mining operation on this major gateway.

Recreation impacts are also important to our economy. Visitors to NM national parks and monuments spend millions of dollars, both in the parks and surrounding communities⁸ and this revenue supports a thousand jobs in the state. Recognition of the value of Cerrillos Hills State Park is growing on a national scale. The park was recently listed in The Guardian, US as one of New Mexico's top 10 national and state parks.⁹

Since the mining application on La Bajada in 2005, the County Park has become an acclaimed State Park. This makes it all the more important to reaffirm Staff's recommendation on earlier applications and to deny this current application.

La Bajada Mesa itself contributes to the landscape that attracts millions annually to this state and specifically to Santa Fe. Strip mining would permanently end that contribution and any future sustainable development in the mesa area.

⁸ Reported 2/28/2012, Associated Press

⁹ <http://www.theguardian.com/travel/2014/jan/23/new-mexico-top-10-national-parks>

Questionable Estimate of Jobs

The application claims their operation will generate 7 full-time jobs. Yet a comparable gravel operation near Cerrillos employed only 3 persons full time with 2 more part time.

BV/Rockology's estimate of seven jobs appears to assume boom times. No assurance has been made that these are new jobs, nor that hiring preference would be given to County residents. Even seven jobs are a poor trade-off when weighed against the long term damage that a poorly sited mining operation would do to present and future sustainable economic benefits.

Potential Expansion of Mining

The current application is the third such proposal for a strip mine on the top of La Bajada Mesa. The proposed site is "surrounded by land owned by the co-applicant for the project." Buena Vista claims 1,358 acres. This land is part of a 5,421 acre parcel currently up for sale by CBRE, marketed as including "5,200 +/- acres of rich aggregate deposits for possible mining."¹⁰ (Appendix, Figure 8)

Thus, if mining were to be permitted now, future expansion requests would be likely under such a precedent. Note that in the 2005 application, these same owners were clear that what was then a ~108 acre site was an "initial site."¹¹

Granting this mining application would make surrounding land unattractive for less intensive and more sustainable uses, such as agriculture or residences. Moreover, the existence of this mine would make it easier to extend mining operations to the surrounding acres, since a key consideration in the Code is whether there is nearby mining. These factors almost guarantee that this 50 acre site would eventually be expanded to include strip mining on a much greater scale, likely similar to an initially proposed two-mile long swath on the Mesa top. The County cannot allow this to happen.

The landowners purchased the property with the current residential/agricultural zoning and they have no protected rights to demand rezoning for extraction.

National and Regional Significance

SGMP Recognizes the Need to Protect La Bajada

The Sustainable Growth Management Plan envisions less intensive use for La Bajada Mesa and the surrounding area. Under planned SGMP the mesa top would be even more protected (160 acre agricultural/ranch) than it is today (40 acre residential/agricultural.) Clearly, the County itself recognizes the importance of minimizing developmental impacts to this important gateway. The County is under no obligation to now rezone this land for mining and permit the applicants to subvert the County's own Sustainable Growth Management Plans.

¹⁰ http://www.cbre.us/services/industrial/AssetLibrary/LandServices_NM_LaBajada.pdf

¹¹ Buildology, 2005, 3.1 Time Frame, CDRC CASE # MIS 05-5230 Buena Vista Mineral Extraction, p. 4

Nationally Significant with Extensive Natural, Cultural, and Recreational Resources

The application describes the surrounding land as "vacant." Yet, as cited earlier under the heading *Location Standards for Article XI Have Not Been Met, 1.2.2*, the area has profound cultural and historical significance, as further shown by these resources:

- New Mexico Heritage Preservation Alliance, Most Endangered Places in New Mexico, 2003 listing of La Bajada Mesa and Escarpment
<http://www.nmheritage.org/wp/wp-content/uploads/2011/04/2003-Most-Endangered.pdf>
- La Bajada 'Official Scenic Historical Marker'
<http://www.raintreecounty.com/LaBmarkr.html>

Gateway to the City of Santa Fe and to the Galisteo Basin Parklands

The Mesa is located at the Southern "gateway" to Santa Fe and the Galisteo Basin State parklands. "The Galisteo Basin is a nationally significant area with extensive natural, cultural, and recreational resources."¹²

The "Potential Gateway Corridor" designated by the SGMP¹³ completely encompasses the proposed mine site and all of the Mesa that is currently for sale by the applicant. Recognition of this area as a Gateway rather than a mining zone is testimony to the wisdom of Santa Fe County, its Staff, elected officials and residents.

SGMP Conceptual Major Wildlife Corridors Nearby

The SGMP displays Conceptual Major Wildlife Corridors showing the area of Applicant's site surrounded by such corridors. Wildlife Network lists the Upper Rio Grande Watershed (including La Bajada) as one of the twenty priority wildlife corridors in all of North America.(Appendix, Figure 1) Other resources confirm the importance of this specific part of the mesa to be crucial to local ecology and wildlife, as shown in Appendix Figure 3 and Figure 4.

Sustainable Cultural Resource

La Bajada Mesa is a NM landscape that sustains artists, photographers, film makers and travelers. It is a frequent subject for artists and photographers alike. Movies (including "No Country for Old Men," Appendix, Figure 7) are filmed here. The Mesa embodies the spirit of New Mexico like no other place can.

"La Bajada Hill . . . is still one of those approaches, those arrivals, that seems mythical, impossibly grand . . . a place that could change not only one's external life but also one's inner, spiritual life . . . 'You will never be the same again.' "

-- Henry Shukman, *The New York Times*, February 4, 2010.

¹³ SGMP Map 5-2 "Scenic and Historic Routes", p. 99

Environmental and Social Welfare Considerations

Air Quality Issues

Below is a partial list of the potential cumulative impacts from the development of a typical sand and gravel mine.

- Dust and diesel fumes generated on the haul road to and from the mine.
- Fugitive dust blowing from the uncovered or partially covered dump trucks.
- Fugitive dust from poorly monitored crushers, out-of-compliance operations, and piles of saleable gravel and waste materials.
- Increased traffic (highways) . . . with a concomitant increase in air pollution from more vehicles (highways and rural roads) and more disturbed land (building construction).
- Increased air pollution from some sand and gravel mines *after* they are abandoned and until natural re-vegetation stabilizes the surface soil.

“Each of the impacts listed above produces real-world effects that are difficult to measure.”

--Steve Blodgett, M.S.

The Cerrillos Hills State Park and villages of Cerrillos and Madrid are downwind from this proposed site with La Cienega just to the north. As has been previously stated, both airborne basalt and silica are capable of causing disability or death. The County has an obligation to do everything in its power to protect the health and welfare of its residents. One way to do that is to deny this application for another unneeded mine that will only exacerbate the air quality issues and endanger residents.

Traffic Impacts

Increased heavy truck traffic, both for crushed rock and for water haulage, will increase wear on County, State, and Federal roads in the area. This will result in costs for upgrading and maintenance of these roads. Under the new SGMP, any developer would be required to pay impact fees to cover these costs before receiving any permit. The current applicant would not pay these costs, meaning that they would be born, involuntarily, by county taxpayers.

Similarly, increased heavy truck traffic increases the risks of accidents, and specifically of passenger vehicle collisions with heavy trucks, which are usually deadly. As noted previously, the increased possibility of severe dust storms on nearby I-25 also poses a very real threat of accidents.

Light Pollution

The application proposes to mitigate night lighting impacts on County Road 57 by angling the lights southward. However, this exacerbates the problem for those residents south of the mine site, and potentially for travelers on I-25.

Further, the County's dark sky ordinance allow exceptions for safety and security – exceptions which the applicants clearly plan to use, stating that “lighting will be used at the tool and administrative trailers to provide the necessary security to avoid vandalism at the site.”

Visibility and Viewshed

What the application calls "vacant" land is a profound panoramic open space with the proposed mine zone visible from portions of I-25, the I-25 frontage road, Waldo Canyon Rd (CR 57), the Turquoise Trail National Scenic Byway, and many roads and homes to the south.

The potential visibility impacts would be apparent upon what has been long recognized as the gateway area to Santa Fe. This area is also the scenic gateway to the Galisteo basin via Waldo Canyon Road that leads to the Cerrillos Hills State Park lands and on to the Ortiz Mountain Educational Preserve.

La Bajada Mesa is the major feature at the Western entrance to the Galisteo Basin. The vistas of the Mesa from the Park, especially from Buffalo Mountain and other areas in and above the Park, sight directly upon the Mesa.

Steve Blodgett, M.S., a mining engineer and author of "Environmental Impacts of Aggregate and Stone Mining in New Mexico" writes about the Cumulative and Associated Environmental Impacts of such mining as proposed in this mesa vicinity.¹⁴

After having walked over the Mesa, in a letter to Ross Lockridge (Aug. 15, 2005), Mr. Blodgett wrote, "Even though the crusher will be out of sight in the bottom of one of the cells once the mine is developed, there will always be a dust plume emerging from this property, especially during the spring winds." Adding, "Again, you won't have to see the actual mine to know it's there because there will be a dust plume marking its location."

In addition to the ever-enlarging pit itself would be all the structures mentioned on p. 10 of the application, including several trailers, screening and several pieces of crushing equipment with belt conveyor systems, water and fuel tanks, several dozers, pole-mounted lights, porta toilets, storage piles and the trucks.

The application says that the "crusher will be located in the excavated cell with limited visibility from public roadways, once the cell is excavated." But then there is the visible pit itself and the stockpiles. What do they plan to locate in front of the stockpiles in order to minimize visibility from I-25 and the frontage road, Waldo Canyon Road, and the rural population to the south?

In their 2008 application, the crusher was to be located "behind the finished stockpiled materials, in order to minimize visibility...." Stock piles by nature are in a state of flux as they are first added to and then loaded onto trucks and transported from the site. Both the pit and the stockpiles would be themselves visible components from the roadways and both would be visible dust sources in the panorama.

There is an unconvincing attempt to spin the visibility issue by emphasizing the "distance from I-25 and CR57" as minimizing the visibility from the roadways, but the distances from these roads are modest, and sight lines are generally unimpeded. Visibility always implies a viewing angle, not merely distance, and depends on the specific topography between the viewpoint and the mine

¹⁴ See <http://www.raintreecounty.com/Blodgett.html#anchor923126>.

or equipment. There are standard methods, developed by the US Park Service and others and widely used both as manual and electronic processes. It is clear that this standard type of analysis was ignored in preparing the application.

However, outside analysis shows that even the surface of the mine site would be clearly visible from sections of the historic Camino Real de Tierra Adentro (Appendix, Figure 2.) The impact to views from important corridors, such as I-25, the Turquoise Trail National Scenic Byway and Waldo Canyon Road, has not been evaluated by this kind of robust, professional analysis.

Considering the importance of this area to New Mexicans, both as entrance to Santa Fe and via CR57 to the Park lands, the views from all directions should have been assessed along with the visual impacts of dust and the impacts to the night sky.

Issues of Trust

False Claims in Previous Applications

We wish to point out a matter of questionable trust. There are several claims, in both the prior and current applications, that are so questionable and so unsupported that they call into question whether these applications were submitted in good faith. Trust is important to be assured that representations of important plans will be followed-through and commitments will be honored (e.g., investing to keep the dust under control).

The application claims that the basaltic material is needed because the “quality of the aggregate pits in the Santa Fe area generally does not meet the requirements for these types [roads, bridges, etc.] of construction projects.” Yet no evidence has been submitted to support that claim. In fact, the application states that the specific gravity of the basalt in question is over 10% lower than a the standard range for basalt.

In 2008, Rockology similarly proclaimed a need “to provide for railroad ballast...for Railrunner...and for subsequent removal of similar material.” However, in March of 2008 we learned from “County spokesman Stephen Ulibarri . . . that county staff has no evidence that the materials mined on the mesa would be used in the train project.”¹⁵ Later it was revealed that the materials claimed by Rockology as needed for the Railrunner had already been acquired by NMDOT from another source, at Pena Blanca. Their claim of need for their material was simply untrue. The claim of “need” for basaltic material implies that it is *absent* in the Santa Fe area. But the applicant omits mention of the on-going basalt operation at Caja del Rio in this instance, only to later reference Delhur when touting the experience of their blasting contractor.

The substantial source of basalt at Caja del Rio clearly demonstrates that a need for additional extraction materials, local or otherwise, is not established. Further, their omission of this significant competitor must call into question the completeness of any other assertions made by the applicants.

¹⁵ New Mexican, P. Haywood, 3/23/08

The omission of Delhur Industries is reminiscent of a similar omission in their 2008 application. Espanola Mercantile, a major competitor, was curiously omitted from both the "Vicinity Map" and from the Cover Sheet images in that application. Rockology's representation of Espanola Mercantile on the Cover Sheet, was mis-located and displayed as a relatively small square on flat land away from the Cerrillos Hills where EM's Waldo Mine is located.

In each of these cases, the applicant's documentation is misleading. Is other information missing or misstated?

Missing, Misleading and Erroneous Information in Current Application

Crushers

The current application states that the " air quality plan will comply with the requirements for the permit issued by the New Mexico Environment Dept. for the crusher that was previously located at another location."

However,. the permit noted is for one crusher, whereas the project lists several others: 2 primary jaw crushers with feeders, a vertical shaft impact crusher, and 2 cone crushers.

Hauling Considerations

Applicants claim the proposed mine would shorten the distances in hauling as compared with currently available sources of aggregate. Their rationale identifies a limited number of quarries in operation with simple unsubstantiated claims of aggregate scarcity. Yet their proposal would demand considerable water truck traffic even if the amount of water needed is underestimated.

If saving haul truck distances is to be a consideration in the siting of this proposed mining zone, surely the *water* haul truck miles, daily, yearly, must be added in to any analysis. Aggregate vs. water hauling distances must be honestly counterbalanced in this comparative location assessment.

Operation Plan / Time Frame

Another unsubstantiated claim is the "25 years" time frame of the mining operation on this 50 acre tract. In 2008 Rockology had planned to strip the same 50 acres of basalt in 12 years, not 25. For a further note of comparison, in 2002 J.R. Hale proposed to strip 500 acres in 50 years, equating to 50 acres in 10 years. In Buildology's application of 2005, the years thought required for stripping 108 acres, was estimated as "15 - 20".

Once again, the applicant's math does not seem to add up. Under Economic Benefits, sales are estimated at 250,000 tons. Under Volumetric Calculations, we learn that 886,000 cubic yards of finished material will be produced for sale over 25 years of operation. According to the Caja del Rio quarry manager, a cubic yard of basalt gravel weighs 1.4 tons.

$886,000 \text{ cubic yards} \times 1.4 \text{ tons per cubic yard} = 1,240,200 \text{ tons of material available for sale.}$

$1,240,200 \text{ tons of material for sale} \div 250,000 \text{ tons sold per year} = 4.96 \text{ years of available material, NOT 25 years.}$ If the applicants do, in fact, plan to be in operation for 25 years, the acreage under excavation would need to be five time larger than currently requested.

Further, the application states that “a total of 3.36 million cubic yards of materials will be excavated over a 25 year time frame.” Yet the “estimated amount of material to be processed through the crusher is 1.26 million cubic yards.” They fail to account for more than 2 million cubic yards of excavated material which, if piled with 45 degree slopes, would be a whopping 132 ft high mountain of rock somewhere.

Lastly, they estimate that 1.26 million cubic yards of material will be processed through the crusher, yet only 886,000 cubic yards of material will be available for sale. Since processed basalt such as gravel includes air pockets, it is less dense than the original material and should result in more volume (cubic yards), not less. But if 1.26 million cubic yards goes in and only 886,000 cubic yards comes out, that means 374,000 cubic yards of material are unaccounted for. The most reasonable (if environmentally disturbing) assumption is that this is the amount of dust produced by the operation – dust for which insufficient water has been budgeted to control, and dust that exposes the citizens of Santa Fe County to the carcinogenic hazards previously documented.

What we can deduce is that with modern mining techniques, the acreage has the potential to expand very quickly and the applicant is downplaying a foot-in-the-door approach. Experience would suggest that if a mine of any size were permitted, future expansions could be expected, along with the precedent-setting use of County water on the adjacent land

Traffic Impacts

Adding additional industrial traffic onto Waldo Canyon Rd (CR57) from both gravel haul trucks and water tankers to that of the Waldo Quarry traffic is not in the public welfare and would further impact the intersection and merging lanes onto I-25.

Further, there is no mention of the number of tanker truck trips that hauled water would add to the site traffic.

Conclusion

We ask our Commissioners to recognize that a mining zone on La Bajada Mesa – an area known and loved by thousands of residents and visitors and serving as the southern gateway to the City of Santa Fe, the Galisteo Basin and the Cerrillos park lands—is contrary to **Article XI, Section 1.2** and would be an irreversible mistake. Moreover, this application is completely inconsistent with the concepts and details built into the new Sustainable Growth Management Plan, a comprehensive plan worked on extensively over the years by County Staff and citizens’ groups. While this application attempts to get in under the wire before the new SLDC is fully adopted, the Commissioners certainly can be guided by new SGMP provisions in those aspects of the application that are not included in specific language of the old code.

The Commissioners have the ability and the obligation to deny proposals that are not in the best interests of the County and its citizens. This proposal is clearly deficient in many ways. Please vote to deny this application. It cannot be modified into compliance, and is not in the public interest.

Sincerely,

Ross Lockridge, Ann Murray, Kim Sorvig, Don Van Doren and Diane Senior for the RCA

Cc.

Encl.

[on the following seven pages]**

MEMORANDUM

DATE: August 18, 2005

TO: County Development Review Committee

FROM: Dominic T. Gonzales, Development Review Specialist II
CHARLIE GONZALES

VIA: Vicki Lucero, Zoning Review Division Director
Charlie D. Gonzales, Permits and Inspections Division Director
Dolores I. Vigil, Land Use Administrator

FILE REF: CDRC CASE # MIS 05-5230 Buena Vista Mine

ISSUE:

Buildology, Inc. (Steve Hooper), applicant, James Siebert, agent, requests approval for the creation of a mine zone to allow the extraction of aggregates for construction materials, to be used in ready-mix concrete, asphalt, landscaping, and base course, on 108.5 acres, as set forth in Article XI of the Land Development Code.

The property is located east of Interstate 25 & south of Waldo Canyon, North of the Village of Cerrillos, within Section 22,26,27, Township 15North, Range 7 East, (Commission District 3).

SUMMARY:

The applicant is requesting approval to create a mine zone for the extraction of aggregates for construction materials on 108.5-acres within a 1,060-acre tract.

The applicant estimates that it will take approximately 15 to 20 years to complete the mining process, which will be conducted in three phases. The mining for each cell phase will occur over an approximate five-year period, with each cell phase to be reclaimed and revegetated after the mining of the cell phase is complete.

The applicant states that during the warmer months (April to September) the site will operate from 7:00am to 5:00pm on weekdays, with Saturday operations to be from 7:00am to 12:00pm.

Acres?

From October till March the hours of operation will be from 9:00am to 4:00pm, with no weekend hours anticipated.

The applicant states that no permanent structures will be constructed on-site, and that the project will utilize temporary and portable structures, to include a tool trailer, administrative trailer, screening and crushing equipment and associated belt conveyor systems, water and fuel storage tanks, and a weigh scale. The structures will be relocated at next phase once the previous phase has been completed.

Phasing

The proposed mine is designed for a 15-year life expectancy to be completed in three 34.5 to 36.9-acre phases.

Phase I of the mining operations will start on a 34.5-acre cell located at the west of the property. Phase II, a 36.9-acre cell, will be located between Phase I and III, and Phase III will be on a 36.8-acre cell located at the east of the property.

The processing and handling of materials for each of the three phases will be done in three sub-phases; Pit Operations, Plant Processing and Product Loading and Distribution:

Pit Operations

Pit operations will consist of the preparation of each cell with the removal of natural soils (overburden). A track dozer will be used to expose the basaltic rock formations. The overburden will be stock piled outside the excavation cell and will be used as topsoil in the reclamation of the site following the completion of each phase. Rock drilling will follow the removal of the overburden, drilled in accordance with the written and approved blasting plan. The applicant states that blast operations will be conducted in compliance with Santa Fe County and Federal ATF regulations, and blasting will only take place during daytime hours. Blasting materials will not be stored on site.

Plant Processing

A front-end loader will feed the blasted material into a feed hopper, followed by crushing, screening, and stockpiling of finished material. The applicant states that the crusher will be located in the excavated cell, with limited visibility of public view. Unusable material will be returned to the excavation area for use in reclamation.

Product Loading and Distribution

A front-end loader will place the finished aggregate products into the haul trucks. All trucks will be required to be compliant with New Mexico Department of Transportation and New Mexico Public Regulation Commission requirements. The applicant states that all loads will be weighed to ensure that the trucks are within legal weight limits, and properly covered to secure the load.

Existing Development

The property is currently vacant. The co-applicants own the vacant properties surrounding the proposed project.

Public Concerns/Issues

The Land Use Department has received numerous telephone calls in opposition of the proposed project. No letters of support have been received. (Exhibit "T").

Access

Access to the property is from County Road 57 (Waldo Canyon Road). The site will have a single driveway, located to the south of the property.

The proposed haul route for aggregate hauling from the site will be northward for approximately one mile along County Road 57 to the I-25/Waldo Interchange. County Road 57 is currently paved from the I-25/Waldo Interchange to the driveway turn off this project will be utilizing.

The Public Works Department has reviewed this application and recommends that a 40' paved apron at the intersection of the proposed driveway and CR57 be constructed. (Refer to "Exhibit-B " reviewing agency responses)

Water

The applicant proposes to utilize non-potable water from the City of Santa Fe Water Treatment Plant for dust control purposes. Water will be hauled by truck from City of Santa Fe Sewer Treatment Plant located at Airport Road, to the site. The applicant states that the water will be stored in a 10,000-gallon tank located onsite. The applicant also states that truck will shuttle water during off peak hours. Drinking water will be purchased in twenty-gallon containers for daily use. (Exhibit "J").

The County Hydrologist has reviewed this application, and commented that even though the applicant states that the proposed project is to utilize City effluent, no letter of commitment from the City was included with the submittal. The County Hydrologist states that for the applicant to meet the water availability requirements, the applicant must provide documentation from the City committing to supplying water to this project for the time period the expect to run this operation. Also the water budget did not reflect whether any water would be needed in the utilization of the crusher and conveyor sprays.

The Office of the State Engineer deferred its review to the County.

Liquid and Solid Waste

The applicant states that portable toilets will be brought onsite for the sanitary purposes of the employees, and a specified maintenance period will be included in the contract for service of the portable toilets.

The Environment Department is currently reviewing this application.

Common trash, generated by employees, will be collected in a solid waste container and periodically hauled off site by the applicant for disposal at the Buildology Offices located in Albuquerque. The solid waste container shall be screened on all four sides and top.

Terrain Management

The proposed project is relatively flat, with no slopes exceeding 20%. Water retention ponds are being proposed capture storm water run-off from the site, and will be located thought each phase of the project.

A Storm Water Pollution Prevention Plan, as required by the E.P.A will be prepared prior to the issuance of a building permit.

Air Quality

A permit from the New Mexico Environmental Department has been issued for a crusher that was previously located at another location. An updated permit or a Relocation permit from NMED will be required prior to the issuance of a Development Permit.

Fire Protection

The applicant states that the 10,000-gallon water tank will be available on site as fire water supply. All mobile equipment and scale house/office will be equipped with fire extinguishers.

The Fire Marshall is currently reviewing this project.

Archeological

The applicant states that prior to the issuance of a Development Permit that an archeological report will be submitted for the proposed project.

This application has been reviewed by the State Office of Cultural Affairs Historic Preservation Division (Exhibit-"B "). The Historic Preservation Office concurs that an archeological survey is needed.

The New Mexico Heritage and Preservation Alliance recently recognized Buffalo Mountain as one of New Mexico's most endangered places.

Article VI, Section 3.3 (Location of Historic or Cultural Sites, Landmarks and Archaeological Districts) lists the Cerrillos Mining District as a Historic or Cultural Site or Landmark (Exhibit "F").

Location/Performance Standards

Article XI of the Land Development Code requires that locational criteria be met for the creation of a mine zone (Exhibit E). Article XI, Section 1.2 requires the demonstration of the existence of resources, that the mining use be compatible with other uses in the area and that the area is suited for mining uses in comparison with other areas of the County.

The applicant addresses Significant Mineral Resource, Mining Use Compatibility, History of Significant Mining Activity in the Area, and Area Suitable for Mining Uses. (Refer to applicant's Report "Exhibit- "C"). The applicant states that a soils investigation of the site was conducted using an excavator to determine the type and depth of the material.

Basaltic material was found at approximately 20 feet, and the basaltic material was relatively constant for the entire depth.

During the construction of I-25, a mine construction site was located directly east of the subject proposed development, which was used for the purpose of loading aggregate ballast materials to be used for the making of base course and asphalt aggregates for the interstate highway construction. A gypsum mining plant was located on Santo Domingo Pueblo property, located to the south and west of the proposed development. The aggregate ballast material was used for the bedding of the railway located to the south and west of this proposed project.

Article XI, Section 1.6 (Performance Standards) of the Land Development states "no mining use activity will be permitted if it is determined that the use will have a significant adverse affect on health, safety, morals or general welfare of the County or its residents."

Reclamation

The applicant states that reclamation will take place upon the completion of each phase of the operation. The sides of the excavation will be cut at a ratio not to exceed 3:1, which will allow for the revegetation of the disturbed sites. The stock piled overburden will be returned to the site and will be used as the base for reseeding. The applicant also states that where the terrain contours are susceptible to erosion, furrows will be created to prevent soil erosion.

REQUIRED ACTION:

The CDRC should review the attached material and consider the recommendation of staff; take action to approve, deny, approve with conditions or table for further analysis of this request.

RECOMMENDATION:

Staff's position is that this location is not compatible or suitable for mining. The cultural significance of the Los Cerrillos Mining District, and without a Archeological Report to address the potential of any significant archaeological sites, ~~and~~ Buffalo Mountain recently being recognized as one of New Mexico's most endangered places, demonstrates the cultural significance and importance of protecting this area. *Handwritten notes: "KUT TH THE ABSOLUTE OF THE DUE TO THE" and "PLEASE NOTE THAT BUFFALO MOUNTAIN"*

Staff is concerned about the potential impacts of this project on adjacent lands in this area. There is a Public Open Space Park and residential developments in close proximity to the proposed mine. Also, Staff has major concerns regarding the applicant's water supply plan. Staff recommends denial on the application based on the reasons stated above.

If the application is approved, staff recommends the following conditions:

1. The applicant shall return to the CDRC and BCC for approvals of future phases, if applicable. The proposed phasing plan for Phases I, II, and III shall be complied with.
2. All water for dust control and irrigation shall be treated effluent unless the applicant amends this application for the use of a well and provides proof of water right and availability; any such amendments shall be reviewed by the CDRC and BCC.
3. If at any time sufficient treated effluent is not available and an amendment for the use of a well has not been approved, all mining shall cease. If mining operations cease for a period of 6 months, the applicant shall reclaim the disturbed areas or the County file a demand on the letter of credit.
4. Compliance with applicable review comments from the following:
 - a) State Engineer
 - b) State Environment Department
 - c) Soil & Water District
 - d) State Department of Transportation
 - e) County Hydrologist
 - f) Zoning Review Director
 - g) County Fire Marshal
 - h) County Public Works
 - i) State Historic Preservation Office
 - j) County Technical Review Division
5. The applicant shall submit for an updated Air Quality permit, and shall be in compliance with the condition of the Air Quality Permit, Relocation Permit and sitting permit.
6. The applicant shall submit a cost estimate and financial surety for completion of required improvements as approved by staff.
7. Compliance with minimum standards for outside lighting, and submit cut sheet prior to the issuance of a Development Permit. All outside lighting shall be shielded.
8. The applicant shall address all staff redlines comments, original redlines shall be returned.
9. All trucks shall have tarps completely covering and securing their loads as they leave the loading area.
10. The Final Plan will be recorded with the County Clerk's Office.

11. The applicant shall submit a financial guarantee for all regarding, revegetation and cost of treated effluent prior to mining of each phase. The financial guarantee will be held until successful revegetation has been accepted by staff, for a minimum of one year, after reseeding.
12. Development Permits for mining and reclamation will be required for each phase. A final closure inspection will be required by the Permits and Inspections Director, upon completion of reclamation of each phase.
13. Each phasing area shall be defined by a licensed Land Surveyor, highly visible (PVC pipe) markers will be set to define the permitted areas. All future mining and operations shall be confined to the working areas permitted in this application.
14. Buildology/ Buena Vista shall grant enforcement/inspection access to the County throughout the duration of this operation.
15. A pre-construction conference shall be held with County Staff prior to any field activity and prior to issuance of a development permit.
16. Buildology/ Buena Vista will keep the access road and mine operations area watered to control dust as needed.

7. Description of Undertaking (what does the project entail?): A 50-acre (20.24-hectare) parcel of private land is proposed for development as a materials extraction pit. This material will be used in construction of the Railrunner commuter line between Albuquerque and Santa Fe. A 3095 x 100' access road was also inventoried. This report is written to seek Santa Fe County clearance. However the pit will be used for the NMDOT-sponsored construction project.		8. Dates of Investigation: (from: 27-Oct to: 03-Nov-2007)

f. Other Description (e.g. well pad footages, mile markers, plats, land grant name, etc.): The ARMS map server indicates the parcel is within the Mesita de Juana Lopez Grant. However GLO records for section 22 indicate it as a non-fractionalized section located with the La Majada Grant (http://www.glorerecords.blm.gov/). The parcel corners as recorded with GPS are SW: 13 E 392408, N 3929974, NW: 13 E 392273, N 3930384, NE: 13 E 392701, N 3930513, SE: 13 E 392829, N 3930110 (CONUS/NAD 27).			
18. Survey Field Methods: Intensity: X 100% coverage <input type="checkbox"/> <100% coverage			

Survey Interval (m): 15 Crew Size: 2 Fieldwork Dates: 27-Oct-2007 Survey Person Hours: 8 Recording Person Hours: 0 Total Hours: 8 Additional Narrative: Two archaeologists spent 4 hours each walking parallel, compass-controlled transects across the project parcel. The parcel corners were pre-determined by using Terrainpro software. These readings constituted the corners on the ground. Garmin GPS 72 and GPS 76 Map global positioning systems were utilized in conjunction with 7.5' quad maps in the field. All photography was done with a Canon Powershot IE S2 digital camera. The access road was covered with two, parallel transects spaced at 15-meter intervals.	
19. Environmental Setting (NRCS soil designation; vegetative community; elevation; etc.): The project parcel is located between 6015-6092' amsl. La Bajada Mesa is characterized by exposures of the Caja, Puye and Ancha formations of the Quaternary Santa Fe group. The Tertiary Galisteo formation intrudes through the predominantly Quaternary basalt exposures at locations along, and most spectacularly at the edge of La Bajada escarpment. Soils within the project area are classified as Calabasas loam over the majority of the project area, in association with Tsinat gravelly loam and Churipa very cobbly sandy loam (websoilsurvey.nrcs.usda.gov/). The last mentioned material is exposed on a southeast-facing slope of a shallow, stabilized arroyo. At that location basalt cobbles and gravels protrude through the surface soils. Calabasas loam is typically found at the summits of interfluvies on plateaus. Calabasas loam has a genesis as aeolian material derived from volcanic ash and pumice, and alluvium derived loess and basalt (ibid). Tsinat gravelly loam occurs in similar settings and has a similar pedogenesis to Calabasas loam. Churipa very cobbly, sandy loam is alluvium derived from basalt, volcanic ash, and scoria (cinders). Soils of these associations suggest a location with a mean annual precipitation rate of 10-12 inches, a mean annual air temperature of 50-52 degrees F and 150-170 frost-free days annually (ibid). The project area is grassland, and is largely lacking any kind of overstory vegetation. Due to past grazing the project area has a large amount of snakeweed and cane cholla growing in it. Also present is saltbush, suggesting other surface disturbances have taken place. Also present in the project area is some winterfat, rabbitbrush, prickly pear, tumblegrass, bluestem and Indian ricegrass. The project area is essentially a grassland environment (Dick-Peddie 1993).	
a. Percent Ground Visibility: 95% b. Condition of Survey Area: The project area appears to have been fairly heavily grazed in the past. The two drainage swales on the property are stabilized and are not eroding. However the lack of significant vegetative cover has led to aeolian deflation, and in some places this is severe enough that soils are eroding away, revealing cobbly basalt intrusions through the thin surface soils. The access road has seen moderate wear. In general it is in good shape, and, while unpaved is not eroding out in any of the locations examined.	
21. CULTURAL RESOURCE FINDINGS <input type="checkbox"/> Yes, See Page 3 <input checked="" type="checkbox"/> No, Discuss Why: Actually we were surprised to find no cultural resources in this area. There is no immediately available water, and the location is exposed to scouring winds blowing across La Bajada Mesa.

Short Contextual Discussion

As mentioned above there is a conflict over placement of the parcel within the Mesita de Juana Lopez or La Majada land grants. According to the GLO records (<http://www.glorerecords.blm.gov/>) six individuals, Jacinto Pelaez, Maria Pelaez, Benigno Ortiz y Sandoval, Luciano Ortiz, Jose Ignacio Dimas, and Marcelino Baca are jointly indicated as the landowners of the section 22 (see attached). A total of 54,404.1 acres were included within the La Majada Grant, and that grant was approved by the Court of Private Land Claims March 25, 1896. As of October 26, 1908 the US government assigned private ownership to the above-named individuals. By July 1, 1985 the subject parcel was on the auction block, having passed into the hands of Buena Vista Associates, Ltd., who in turn pledged it as collateral on other obligations that were not met. It appears that the interval of 77-years resulted in the grant being cut up into individual parcels, and likely subject to a series of real estate transactions. While not a homestead is possible that portions of La Majada grant, like many properties in New Mexico, were lost to local and federal government during the Depression, when many New Mexico

Figure 7: *No Country for Old Men* promo, looking south across La Bajada Mesa to the Ortiz Mountains

Figure 8: Page 1 of the CBRE marketing package describing the La Bajada Property as “5,200 +/- acres of rich aggregate deposits for possible mining.”

Property Overview

CB Richard Ellis Land Services Group has been engaged as the exclusive listing representative for the sale of La Bojada. The property consists of approximately 5,421 +/- acres of vacant land of which includes 5,200 +/- acres of high aggregate deposits for possible mining. (See Buildology correspondence).

La Bajada is the largest privately owned parcel of land located on Interstate 25 between Albuquerque and Santa Fe in New Mexico. It features over 10,000 feet of Interstate 25 frontage with two major north and south interchanges into the site. Exit 264 (State Highway 16) located at the northwest corner of the property connects to the Cochiti Indian Reservation and Santo Domingo Pueblo. Exit 267 (County Road 57) is at the northeast corner of the La Bajada property and connects Highway 14 to the Madrid/Cerrillos Mountains. La Bajada is approximately 35 minutes from the Albuquerque International Support and 15 minutes from Santa Fe Plaza.

This exceptional property has tremendous development potential, both in terms of a residential master plan and as an aggregate resource. La Bajada is uniquely situated between Albuquerque, New Mexico's largest metro area with a population of over 850,000, and the exclusive Santa Fe market. With an elevation of over 6,100 feet, La Bajada's terrain is rich and has varied scenic views from within the heart of the property, including views of Santa Fe National Forest, Cerrillos Mountains, Jemez Mountains, Sangre de Cristo Mountains, Sandia Mountains and the Ortiz Mountains.

The general area is recognized for its mining and railroad history. Existing mines within the area include Rosario and older mining towns of Wabdo, Cerillos and Madrid oil adding to the ambliance of the area. Even today, the main rail line to northern New Mexico and Colorado runs through the heart of the land with plans to have the new Rail Runner spur come directly off the main line within the site. The light rail commuter train is due to be in service in late 2008.

INVESTMENT SUMMARY

Price: \$65,052,000 (\$12,000/acre)

Site Area: Approx. 5,421 +/- Acres.

Property Description: The improvements consist of existing cell towers which are not part of offering, existing main line rail, and 5,200 +/- Acres of Aggregate

Legal Description: Tract A, B, & C La Bajada

Petition Signatures

The following pages include approximately 6600 signatures of individuals who signed a petition urging the Board of County Commissioners to deny the application to allow a strip mine on La Bajada Mesa.

The petitions presented are in three sections:

- On-line petition signatures from 3375 New Mexico residents
- On-line petition signatures from 766 individuals who live elsewhere in the United States or in other countries. These people signed the petition because they know about New Mexico's unique characteristics and want to help preserve it.
- Paper signatures from almost 2500 residents and non-residents who were visitors to our communities.

Signatures continue to come in, and additional ones will be presented at the meeting on June 11.

133	Melissa Houser	Santa Fe	NM	<p>Do you want every visitor to Santa Fe to be horrified as they enter our city like they are driving through southern New Mexico?</p> <p>Mining requires water. We are having MAJOR water shortages in our state. Maybe we should Prize and allocate our water, our land, which is our life source More than we Prize the need to expand a few wallets. La Bajada is a special place in NM that sits in the hearts of all of New Mexicans. The Natives crossed its meadows and sheltered in its hills. It represented the division between Rio Arriba, the highlands, and Rio Abajo, the lowlands for the Spanish and it is the dividing line for Nortenos, who felt they were of a different culture than the lowlanders below. And for the everyone the scenic vistas have taken their breath away.</p> <p>Don't be the ones to let that be destroyed, Please.</p> <p>Native Santa Fe Resident</p>
134	Amberwind Barnhart	Silver City	NM	
135	Keist	Belen	NM	<p>Please don't strip-mine on the Mesa; leave at least something unmarred and unspoiled in this world. Thank you.</p>
136	Valerie Levine	Santa Fe	NM	
137	Donna Thibodeaux	Madrid	NM	
138	Debrianna Mansini	SANTA FE	NM	<p>Without water we cannot survive . The drought should make this more than apparent to ALL of us. Stop this and protect our water.</p>
139	Letitia Roller	santa Fe	NM	<p>Putting a scar on the earth so near a historical and residential area makes no sense. This is not the area for a strip mine. The need for the use of water for the operation should send up a big warning signal for ALL concerned. The real resource here are residents and tourism, both would be severely compromised by allowing strip mining.</p>
140	Peter Grahame	Village Of Los Ra	NM	
141	Kim Sorvig	Santa Fe	NM	<p>Between slumped construction and increased recycling of stone aggregate during road work, the need for a new mine in a county that already has at least one is highly doubtful. That merely amplifies the inappropriateness of this venture, given the damage such a mine could do to irreplaceable water resources and to our tourism economy.</p>

Stop the Strip Mine on La Bajada Mesa -- 3375 NM Signatures

142	Colleen McCann	Santa fe	NM	The county should be more aware of destructive non-sustainable mining practices esp. in this case where they are selling potable water from Rte 14 which is supposed to be reserved for local residences. NM is now entering its 14th consecutive year of drought. ANY and ALL potable water resources should be kept off limits for any and all construction/mining commercial enterprises. Grey water should be used for ANY and ALL construction/mining commercial enterprises. The water reserve on Rte 14 is supposed to be for residences, not commercial enterprises. You can see this by looking back at teh county's old web sites using: Wayback Machine - Official Site archive.org/web/web.php

279	Phyllis Detrich	Santa Fe	NM	
280	Emilie Sederholm	Cerrillos	NM	
281	Carol Aageson	Santa Fe	NM	
282	Annie Whitney	Madrid	NM	I urge you to deny the proposed gravel strip mine on the top of La Bajada Mesa, south of Santa Fe near I-25. This is one of the most important historical, cultural, and scenic landmarks in New Mexico. In addition, the County has unconscionably agreed to sell scarce, potable water for mining operations and for dust control. Please stop the destruction of this treasure. Go to www.savelabajada.org for further information
283	Lynne Thomas	Albuquerque	NM	On the grounds of water use for 25 years alone, this is an unsound project, given the extreme drought conditions NM is experiencing and anticipating for perhaps 100 years.
284	Rick Westbrook	Madrid	NM	Resident, owner, tax payer for 19 years. This mining proposal is obscene. Support of it is equally obscene and will be remmemerred as such.
285	Cindy	Taos	NM	
286	Archie Tew	Santa Fe	NM	Gallons of Potable water to be used for dust control? Really? In drought conditions? Acres of desecrated land for 7 local jobs? Really? Trucks, nighttime lights, dust, blasting and a scar that will never go away at the main corridor to Northern New Mexico. Really? Not really.....
287	Joann Girard	Albuquerque	NM	I am in the process of moving to Cerrillos, and was initially attracted to the area because of the beauty of the area. This strip mine would irrevocably damage the views, and greatly impact the water situation, which is already precarious.

Stop the Strip Mine on La Bajada Mesa -- 3375 NM Signatures

288	David Reid	albuquerque	NM	
289	Nancy David	Cerrillos	NM	Dear Santa Fe Board of County Commissioners, Please do NOT give in to corporate interests in the name of destroying our beautiful La Bajada! Please do the right thing to save our precious New Mexico beauty; we don't need another gravel mine in our areal Enough is enough!
290	Roseann Rice	Albuquerque	NM	One of the main reasons we bought our property off of Gold Mine Road was the incredible views. Our initial tourist visits going up/down the mesa was what first attracted us to the area. We concentrated our efforts to find our property in an area that overlooked that beautiful mesa. I believe destroying it to mine would not only hurt the tourist trade but the real estate market as well. In addition, water is such a scarce and vital resource it would be criminal to use in such a manner. Residents are practicing conservation and curbing their use. I would think our county would do the same.

318	Anna Rayne-Levi	SANTA FE	NM	
319	Sally Blakemore	Santa Fe	NM	I came to New Mexico 25 years ago to illustrate a series of children's books called Kidding Around Santa Fe. My first drawings were of La Bajada Mesa. The ungouged, pristine landscape and small town were a thrill for residents and tourists. Tourists come to New Mexico to find a sort of peace, a difference in the world. New Mexico has lost its way to greed and ugliness. Mining an incredible landscape is more than obtaining gravel. It is a putrifaction of the soul of nature and what the entrance to this great ancient city is about it soul and faith. Resources for the soul is what we can mine here and keeping this incredible land without blemish is the key.

363	Gurufateh Khalsa	Santa Cruz	NM	NO!
364	Lynn Allen	Santa Fe	NM	You are selling my drinking water for washing gravel??? My DRINKING WATER is more valuable and if you do not protect it. I will remember in November. Richard Cook is already operating a mine there and there is no reason for another. New gravel mines should be where DRINKING water is not scarce - and they should be required to purify it to a potable state after they use it. Tax payers are fed up with being abused by corporations and their elected officials.

Stop the Strip Mine on La Bajada Mesa -- 3375 NM Signatures

365	Georgia Allen	Santa Fe	NM	Any mining operation in the La Bajada Mesa area will adversely impact the quality of air in my neighborhood, and reduce the value of my property. I strongly oppose approval of this proposed strip mine.
366	Melanie West	Santa Fe	NM	
367	Connie Henderson	Sandia Park	NM	
368	Ron Strauss	Santa Fe	NM	Clearly, there's financial gain (for a while) for a small number of corporations, if this goes through, but what is the gain -- financially, environmentally, quality-of-life-wise or otherwise -- for residents of the area, visitors to the area, present and future lovers of New Mexico? (Answer: zero - zip.)
369	Sam Taccetta	Albuquerque	NM	
370	Leonard Leschander	Santa Fe	NM	
371	Deidra Montoya	Albuquerque	NM	
372	Dan Simpson	Santa Fe	NM	
373	Tabitha Herring	Tijeras	NM	I must insist that some of New Mexico be left alone. Mining has it's purpose and all but so does natural, untouched beauty. Please consider leaving La Bajada alone so that future generations can enjoy the land we have today.
374	Janet Hevey	Albuquerque	NM	
375	Arnold Valdez	Santa Fe	NM	
376	Althea Reustle	Cerrillos	NM	No amount of gravel or corporate profit is worth the desecration of La Bajada and THERE IS NO WATER.

389	Raquel Casillas	Santa Fe	NM	
390	Barbara Kimbell	Santa Fe	NM	
391	Peter Nisbet	Santa Fe	NM	Sirs: As an artist I can attest to the area being considered as one of the most beautiful landscapes in all of New Mexico. It is a treasure and would be a sacrilege to mine there. Please say no, for all of us.
392	Karen Milstein	santa fe	NM	
393	Marilyn McEvoy	Santa Fe	NM	
394	Jack Williams	Tesuque Pueblo	NM	This is not needed, and not wanted. It takes too much water, causes more traffic, slathers the whole area in yet MORE dust, interrupts wildlife, is an eyesore, hurts tourism and these owners have been trying to destroy La Bajada for a long time with their various unwanted proposals. They shouldn't be rewarded for being technically "to code" --which I don't understand how that could be---when other people are given such a hard time about minor development and changes to their personal homes, septic rules, etc. Don't let these greedy, unwanted neighbors destroy OUR public vistas, quiet enjoyment, and shared resources.
395	Michael Holzscheiter	Santa Fe	NM	One of the biggest assets New Mexico has is the pristine landscape, clean air, and blue skies. It is these assets which bring many thousands of tourists to Northern New Mexico, generating millions of dollars in revenue and supporting uncounted jobs. Let's not destroy that for the profit of a few individuals and seven lousy jobs.
396	Antonio Santos	Santa Fe	NM	This disastrous proposal would have multiple negative consequences both locally and statewide.
397	Anna Brown	Madrid	NM	
398	Patricia Hug	Santa Fe	NM	THERE'S NO WATER! DON'T USE WHAT LITTLE WE HAVE FOR MINING!!!!

554	Jennifer Box	Cerrillos	NM	We need water for a lot more reasons than this! We will fight this from happening in our State!
555	Barb Troje	West Las Vegas	NM	
556	Mark Hoeffler	ALBUQUERQUE	NM	
557	Craig Anderson	Santa Fe	NM	William Clift's stunning archival photographs of this La Bajada area landscape are absolutely comparable to Ansel Adams' landscape photography of the wild landscapes of New Mexico and California. It is imperative that citizens take notice and stand-up for preserving what little of the iconic high desert plateau landscape remains undisturbed by commercial ventures that could easily be located in less beautiful, less environmentally sensitive and more appropriate and accessible areas already dedicated to such commercial purposes. I also find it incredible that if approved, the Santa Fe County Commission is proposing to deliver huge volumes of potable water to the operation of this gravel pit, at a time of drought and climate change. All of these things hang in the balance against defacing a treasured landscape? For maintaining 7 jobs? It's nuts.. Please pass this information along to other concerned citizens.. and go to the website: www.savelabajada.org Craig Anderson, Santa Fe, NM

Stop the Strip Mine on La Bajada Mesa -- 3375 NM Signatures

558	John Thomas	Albuquerque	NM	(A) This is a desert. (B) There's a shortage of potable water and irrigating is already restricted. (C) There's also a drought. (D) Water restrictions will likely become more severe. (E) Strip mining is an atrocity against the land. (F) Once land has been destroyed. (G) We've already sacrificed far too many acres to corporate greed. (H) It may already be too late to repair the damage that's been done. (I) We need representation in elected offices with the long view of quality of life, rather than the short review of a quick buck. Please do what is necessary to stop the destruction of priceless natural treasure. (J) Loss of La Bajada Mesa would be a perverse kind of immortality.

S95	David Halpern	Santa Fe	NM	
S96	Cheryl Gibson	Albuquerque	NM	
S97	Black	Rio Rancho	NM	If approved this will effect our water resources which are already in short supply normally due to our naturally arid climate but will be especially harmful due to our continuing drought.
				This will also ruin a beautiful part of our state on the most travelled stretch of interstate highway in New Mexico. You would be foolish to think that this would not effect tourism.
				Strip mining ruins the landscape and the resources not just for years or decades after the resources are depleted. The iron range in Minnesota still bares the scars of strip mining more than a century later. The slag heaps are ugly and don't go away. The by products of the mining process effects the air quality and water table and resources far beyond the immediate area. Please Deny the application for the proposed strip mining on the top of La Bajada Mesa.
S98	Sumner Walz	Santa Fe	NM	This is an important historical and cultural area, unique in the United States. It is not an appropriate place for an eyesore.

622	Michelle Stump	los alamos	NM
623	Kathie Lehner	Corrales	NM

NM environment is some of the most fragile in the SW. It is also a state without a major water source. Reliance upon the water we have is not only critical to maintain its purity but also to conserve it in the midst if this drought. Previous water drought patterns forced the Anasazi civilization to splinter in the 1100s. The current drought could be indicative of similar conditions as some have predicted. Thank you for listening.

1500	Kathleen Koltes	Santa Fe	NM	
1501	Nancy	Santa Fe	NM	
1502	Kurt Anschuetz	Albuquerque, NM	NM	Among its many virtues, La Bajada Mesa offers a rich assemblage of sensitive cultural resources, including archaeological sites and cultural landscape features considered significant among nearby Native American tribes. Archaeologists have identified great Ancestral Pueblo (ca. AD 1300-1600) agricultural field complexes along the mesa's escarpment and the waterways draining its interior. The proposed mining operations appear to focus on three such waterways. The mine site, therefore, possess the potential to be directly within a agricultural landscape with cultural-historical, as well as scientific, significance.

1714	Kenneth Kast	Santa Fe	NM	
1715	Christine Patten	Vadito	NM	
1716	Smaoa Wallach	santa fe	NM	This project would utilize toooo much water. Water is in short supply in our state. How greedy can one company be!
1717	Gloria Maschmeyer	Santa Fe	NM	I oppose this this project.
1718	Richard Maschmeyer	Santa Fe	NM	I greatly oppose this project.
1719	gerinewton	albuquerque	NM	
1720	Iscah Carey	Tesuque Pueblo	NM	
1721	Linda Starr	Albuquerque	NM	How horrible! We were just recently hiking on top of La Bajada Mesa and wondered about the surveying going on. Now we know. It has a destructive purpose. Please stop stripping mother nature.
1722	Cathy Garber	Placitas	NM	
1723	Susan Greiwe	Albuquerque	NM	Please stop the proposed strip mine on La Bajada Mesa. New Mexico has so few sight lines that are uninterrupted by scarring from past mining ventures and La Bajada has a beautiful vista. And, such mining requires so much water to process, water that should be used for more precious uses. Please NO STRIP MINE on La Bajada!
1724	Zoe Van Raan	Santa Fe	NM	
1725	Raoul Trujillo	Truchas	NM	

Stop the Strip Mine on La Bajada Mesa -- 3375 NM Signatures

1726	Hawks	Placitas	NM	I feel it is very important to stop the gravel strip mine on La Bajada Mesa. It is also important to realize that this destroys the natural beauty of NM, wastes water, creates an ugly and dangerous site.
1727	Alexis Brown	Santa Fe	NM	
1728	Kris Jackson	Los Padillas	NM	
1729	Karen Reyer	Santa Fe	NM	Let Joe Miller tear up the country where his gravel pit is. No need to start another one. Why are entities always attacking and decimating the earth? tears
1730	Rev. Theodore Cooley	Albuquerque	NM	As a charter member of the Camino Real Trail Association, I believe this impacts in the area of the old trail. This area is historic, do not allow it to be destroyed.
1731	William Scruggs	SANTA FE	NM	
1732	Linda Scruggs	Santa Fe	NM	
1733	Ron Cooper	ranchos de taos	NM	
1734	Carol Cook	Cochiti Lake	NM	ABSOLUTELY NO, NO, NO!!!!
1735	Paula Vallejos	Albuquerque	NM	
1736	Deborah Boldt	Santa Fe	NM	Let's come to our senses!
1737	Rebeca Price	Santa Fe	NM	Insanity!
1738	Jay Grace	Santa Fe	NM	No to dust pollution.
1739	Kerry Lee	Albuquerque	NM	
1740	Sarah S	Lamy	NM	
1741	Ashley Eastwood	Madrid	NM	Keep this area wild!
1742	Kate	Albuquerque	NM	
1743	Shannon Hanson	Santa Fe	NM	
1744	Stephane Ligtelyn	Santa Fe	NM	Since when did SF Co have "extra water"? Allowing this strip mine to become reality is nothing short of insanity.
1745	Leroy Harrell	Santa Fe	NM	This strip mine must NOT be approved. It would be highly irrational, and quite destructive to our community and its water supply. We are already in a state of extreme drought. Do not allow our communities to be devastated by this mine!
1746	Judy Nelson-Moore	Santa Fe	NM	Please don't destroy this area. Surely there are other places to get gravel.
1747	Karin Begg	Santa Fe	NM	I understand that gravel is a necessary and important resource, however I do believe there are plenty of less blatant and destructive places to get it. Please not La Bajada mesa. This is a beautiful and sacred land. Let us be respectful, responsible and wise in how we support our people and way of life in this delicate and beautiful land. Karin Begg

2494	Santiago Romero	Santa Fe	NM
2495	Robert Sandrin	Santa Fe	NM

Stop the Strip Mine on La Bajada Mesa -- 3375 NM Signatures

2496	Diana James	Santa Fe	NM	Simply speaking from a resource standpoint, we can't afford these kinds of operations anymore. The question is, who will profit from this? Don't think for a moment that we're not watching, or that we won't find out the answer to that question. We are all accountable for what we do, and for what we don't do. Please stop this short-sighted, irresponsible action now.
2497	Norma Marino-Baca	Santa fe	NM	
2498	Martha Flannery	santa fe	NM	stop the strip mine!!!!!!!!!!
2499	Sandra Anderson	santa fe	NM	This exhilarating view is likely one of the most driven routes in NM by residents and tourists alike----as is between Santa Fe and the ABQ airport. Let's keep its irreplaceable enjoyment intact for all.
2500	Emily Brown	Santa Fe	NM	
2501	Amy Morton	Edgewood	NM	
2502	Frances Bentley	Santa Fe	NM	
2503	Blair Clark	Santa Fe	NM	
2504	Maria Perez	Tesuque Pueblo	NM	please stop thinking that destroying the land is acceptable in the name of industry. we don't have water in NM! don't waste the little bit we have on gravel!
2505	Jill Fernandez	santa fe	NM	do the right thing!
2506	David Jenness	Santa Fe	NM	
2507	Marilyn Matthews	Santa Fe	NM	
2508	Jennifer Higginbotham	Santa Fe	NM	Jennifer Higginbotham
2509	Crennan Ray	Santa Fe	NM

2511	Marion Oldham	Santa Fe	NM	
2512	Iris Romero	santa fe	NM	
2513	Linda Buchser	Santa Fe	NM	So there is the possibility of a permit for a destructive, extractive business that will drain our dwindling water supply and irreparably damage the historic, scenic, and cultural aspects of La Bajada Mesa. Is this the sort of legacy you want to leave? I hope for better of you than that.
2514	Thomas House	Santa Fe	NM	Please do not scar La Bajada Mesa and create even more light pollution.
2515	Roxane	Tesuque	NM	
2516	Suzanne Valdez	Santa Fe	NM	
2517	Heidi Britt	Santa Fe	NM	We cannot destroy this beautiful entrance to Santa Fe. We have to be more sensitive about our landscape. Isn't this why people come to NM?

Stop the Strip Mine on La Bajada Mesa -- 3375 NM Signatures

2518	Madelynn Kirkpatrick	Santa Fe	NM	La Bajada is a significant place in NM history and culture. It is unbelievable that the county would sell our most precious life-giving resource - water - to aid in the destruction of one of our most significant landscapes which actually helped to shape the culture of northern N.M. What are they thinking! Who is benefiting from this act which betrays the rights of the citizens of this state to protect those places, structures, and things that are of value to us all.
2519	Stan Moolenijzer	Santa Fe	NM	
2520	Neena Paul	Tesuque	NM	
2521	Thor Sigstedt	Santa Fe	NM	La Bajada is a historically and aesthetically significant piece of our cultural landscape and viewshed and must be protected so that the world can continue to enjoy and marvel at it without having to constantly fend off water consuming and viewshed destructive mining operations.
2522	Charlie Johnston	Santa Fe	NM	If the County is so willing to sell POTABLE water to this entity then I should be able to drill my own well in Eldorado at Santa Fe ! make them haul non-potable water from the sewage treatment plant -like most contractors have to do. This is absolutely unconscionable for the County to approve this water waste!
2523	Cheryl James	Santa Fe	NM	
2524	Janie Chodosh	Santa fe	NM

2931	Elizabeth Kingman	Santa Fe	NM	
2932	Riendo Arroyo	Pena Blanca	NM	
2933	Cheryl Howell	Santa Fe	NM	
2934	William Craig	Santa Fe	NM	Why not preserve La Bajada as a recreational area, as has been done for several other threatened open spaces all around Santa Fe? Why not expand the nearby Cerrillos Hills State Park with its spectacular trail network? There is already a noisy, ugly gravel quarry just northwest of the park, generating quite a bit of truck traffic along narrow Waldo Canyon Road to I-25. Another such operation in the area would only make things worse. Construction of the Rail Runner track in 2008 has also had a devastating effect on La Bajada, cutting a gigantic scar on the formerly pristine desert landscape. ¡Ya basta!
2935	Janeane Harwell	Albuquerque	NM	
2936	Alan Osborne	Santa Fe, NM	NM	This strip mine is an abomination to those who want to preserve the viewscape of La Bajada which is already desecrated by the obnoxious cell tower. Don't further destroy our natural beauty which is the number one reason visitors come to The Land of Enchantment. Respect nature don't destroy it, please.
2937	Linda Weisband	Placitas	NM

3183	William Wallick	Placitas	NM	Please don't let strip mining in!
3184	Lynn Allen	Santa Fe	NM	There was one other point that I did not hear mentioned. The Rockology presentation noted that there was "a lot of activity near their location, underground lines for - electric, AND The Main Natural Gas pipeline supplying Santa Fe with Natural Gas". According to their map, the Natural Gas Pipeline is very close to the corner of their property, where they will begin of their mining project.

It does seem a bit odd that no one thought that blasting solid rock for many years close to the existing pipeline over many years would not affect the pipeline.

I don't remember anyone mentioning getting approval of a professional utility source saying continued blasting would be fine for the pipeline. We have seen natural gas explosions lately, and I wonder how old the pipeline is, and if any authority inspects it and would vouch for blasting being OK. This is the kind of problem that could be considered by a reliable government agency. Does the NM PRC have anything to do with this? Should they?

Stop the Strip Mine on La Bajada Mesa -- 766 Signatures from Outside NM

#	Name	City	State	Country	Comment
193	Tara Meixsell	New Castle	CO	United States	I urge you to deny the proposed gravel strip mine on the top of La Bajada Mesa, south of Santa Fe near I-25. This is one of the most important historical, cultural, and scenic landmarks in New Mexico. In addition, the County has unconscionably agreed to sell scarce, potable water for mining operations and for dust control. Please stop the destruction of this treasure. Go to www.savelabajada.org for further information.
194	David V. Hill Ph.D.	Denver	CO	United States	Their are better and less impactful places to put the gravel pit.
