Mr. Sisneros,

This email is in regards to the installation of the AES project in Santa Fe.

The construction of a massive solar array with unstable, extremely dangerous carcinogenic contents should **NOT** be approved!! If approved, this project will cause contamination and pollution of both the air, land and our aquifers. It will have life changing circumstances causing real estate depreciation, along with numerous health & well being issues. This has already happened at locations where there have been fires caused by the batteries catching on fire.

These type of projects have caused massive fires, which are **very hard** to extinguish. With the high winds and open land in this area, fire will spread rapidly. Along with that, toxic chemicals will be dispersed throughout the area. Please do the research, as this project should not be approved for this area.

Thank you!

Nancy Simmons
