

Rancho Viejo Solar Project

New Mexico Department of Transportation Access Permit

Access to and from the solar facility will be in conformance with NM State Highway access permit standards. The property currently has an existing gated access point on NM 14 approximately 350 feet north of the existing Turquoise Trail Charter School. This entry will be improved to facilitate traffic for the construction of the solar facility and the ongoing operations and maintenance.

Bohannon Huston submitted a Site Threshold Analysis (STA) to NMDOT District 5, in anticipation of obtaining the new NMDOT Access Permit. The STA examined existing roadway volumes and anticipated site trip generation for the purpose of determining if additional analyses are required as defined by the District Traffic Engineer. Per the STA, NM 14, at Milepost 41.5, has a Roadway ADT of 5,841. Based on the State Access Management Manual (SAMM) a TIA is required for developments that generate 100 or more peak hour total trips. Based on an analysis of the projects trip generation both during the temporary 12-month construction period and ongoing operations and maintenance, Bohannon Huston has determined that additional traffic impact studies (TIA) are not warranted per the SAMM. Specifics of the project's trip generation include:

On October 25, 2022, NMDOT accepted the STA as submitted and requested application for a NMDOT Access Permit. On December 19, 2022, NMDOT Environmental Design Division provided environmental clearance of the application. On January 18, 2023, the NMDOT Drainage Design Bureau provided acceptance of the application. At the time of the CUP application submittal, the NMDOT Access Permit, having received environmental clearance and drainage acceptance, has been provided to the NMDOT District 5 Traffic Engineer for District Approval.

Documentation from NM DOT is enclosed.

Hello Javier,

We clarified the location of the existing access point and the proposed access point on NM 14 and would like to provide you a revised version (attached).

Please let me know if you have any questions.

Thank you,

Carl Vermillion PE, PTOE, RSP1

Hello Javier,

I appreciate the confirmation on our approach for this development. We have completed the STH form and the memo for your review.

Please let me know if you have any questions or want to discuss anything for the development.

Thank you!

Subject: RE: [EXTERNAL] New Solar Site STA

Good Afternoon Carl,

Yes the form with a memo should be sufficient for this type of development. Depending on the location we have required a deceleration lane for the construction activities depending on the duration. We can discuss after you have submitted the memo and STH form for review.

Thank you,

Javier Martinez, P.E.

Subject: [EXTERNAL] New Solar Site STA

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Hello Javier,

Hope you are doing well.

BHI is doing some work for a new 600 acre EV solar site just south of Santa Fe and I am preparing the STH form and a memo to go along with it justifying the generation traffic used for the construction activities at the site.

The initial information provided by the development team includes some assumptions of traffic to the site.

Construction Phase – Duration 12 months

- PV Solar install: assume 75 to 150 workers per day
- BESS install: assume 40 workers per day
- Deliveries: assume 10 material/equipment deliveries per day

Operations Phase

O&M: assume 4 workers per month

The specifics is that the construction traffic will generate the most traffic to the site so the memo I am creating speaks to that specifically.

Moving forward on this, I just am hoping for a clarification for how these types of “developments” are handled? Does the NMDOT typically require more than the STH form for an EV facility like this or is the STH with the memo sufficient?

Site Threshold Analysis (STA)

According to NMAC 18.31.6.16, a traffic engineering evaluation shall be required for all land development proposals that may directly or indirectly impact a state highway facility. A Site Threshold Analysis (STA) is required of all developing or re-developing properties that directly or indirectly access a state roadway. The STA examines existing roadway volumes and anticipated site trip generation for the purpose of determining if additional analyses are required as defined by the District Traffic Engineer or designee. If the site characteristics and the trip generation estimate for a proposed development are greater than 100 trips in a peak hour, then requirements for a Traffic Impact Analysis (TIA) may be required as determined by the District Traffic Engineer or designee. See TIA outline for that scope.

The STA shall warrant one or all of the following conditions:

- May or may not warrant an additional traffic analysis.
- May or may not warrant off-site improvements.
- May require a TIA, which may or may not require off-site improvements.

If additional analysis is required based on the results of the STA, the District Traffic Engineer or designee, should indicate to the applicant the level of analysis that is required.

TO: Javier Martinez, PE, NMDOT District 5 Assistant District Engineer
FROM: Carl Vermillion
DATE: October 5, 2022
SUBJECT: AES Rancho Viejo Solar Development – Traffic Assessment

Bohannon Huston has prepared a site threshold assessment for a proposed 800-acre solar farm to be developed by the AES corporation. This memorandum includes an assessment of the vehicle trip generation anticipated during typical operations after the project is build and traffic during project construction along with discussion on access points onto NM 14.

Project Description

The proposed project is a new solar farm installation located in Santa Fe County east of NM 14 in the vicinity of the existing Turquoise Trail Charter school. Construction of the site will consist of a 96 Megawatt (MW) installation within an area of approximately 800 acres of land (see attached figure for location). This installation may incorporate a Battery energy storage system (BESS) on the property. The main assessment of traffic will result from the operational activities of the site after construction and the second traffic assessment will focus on traffic impacts related to the construction of the proposed facility including the BESS system.

Once operational, the site will be primarily self-sustaining with no permanent employees on-site; however, employees will visit the site monthly to conduct operations and maintenance activities. No more than 4 workers will be on-site at any given time. As a result, the number of employee vehicle trips generated by the site during typical operations is considered negligible. The information provided will result in the following peak hour traffic generation distribution:

AM Peak Hour: Entering – 4 vehicles; Exiting – 0 vehicles

PM Peak Hour: Entering – 0 vehicles; Exiting – 4 vehicles

Based on the State Access Management Manual (SAMM) a TIA is required for developments that generate 100 or more peak hour total trips. As the worst case trip generation results in 4 vehicles per hour for either peak hour, a TIA for this development is not required.

However, the primary traffic concern for the proposed project is associated with the potential temporary construction traffic impacts. The construction of the site is anticipated to last approximately 12 months beginning at the end of 2023. Construction is anticipated to require a maximum of 190 workers on-site per day. The personnel will be local workforce and they will be encouraged to carpool to the site each day. Construction staff will be on-site between 7 AM to 4 PM Monday through Friday.

Similar to the construction of solar facilities in other locations, the number of employees for the first 2 months and the last 2 months of construction will be lower with peak on-site employment occurring for the eight months in the middle of the project schedule. The traffic generation values incorporate both the solar farm and the BESS. This estimate is considered conservative for this site since the BESS system may or may not be constructed as part of the solar facility.

The number and type of vehicles planned to be involved during peak construction are described as follows:

- 10 heavy haul trucks (ex: 18 wheeler deliveries, water trucks, garbage trucks) per day
- 75 to 150 work trucks (ex: crew, foreman, superintendents) per day
- 40 work trucks specifically for the BESS install per day

As construction activities will be a much higher generator than the day-to-day activities of the site, the NMDOT may want to consider traffic impacts based on the traffic during the construction phase. It is anticipated that 190 work trucks will arrive between 6:30 and 7AM and will depart the site at 4PM. The 10 heavy trucks will arrive on the site outside of the anticipated peak hours. At the adjacent intersection of NM 14 and NM 599 the peak hours are 7:30 to 8:30AM and 4:30 to 5:30PM. It is anticipated that some of the traffic associated with this site may arrive during the peak hour but the majority will travel prior to the AM and PM peak hours.

With the information provided above, peak hour trips were generated. This will result in the following traffic generation distribution:

AM Peak Hour: Entering – 190 vehicles; Exiting – 0 vehicles

PM Peak Hour: Entering – 0 vehicles; Exiting – 190 vehicles

It is Bohannon Huston's professional opinion that this is a conservative approach to account for all trips during the peak hour associated with the construction activities for the development site.

Vehicle Access

An existing access point for the property has a gated entry on NM 14 1,300 feet to the north of the existing Turquoise Trail Charter School. This entry serves the development property today, but the development wants to improve and realign this access point to facilitate traffic for the construction of the solar farm. As part of this realignment, the access point will be moved to the north approximately 450 feet to align with the existing on site travel pattern. This new location will be located approximately 100 feet to the north of the existing driveway on the west side of NM 14. It is understood that this will require a new driveway permit with the NMDOT and this process will begin soon after this STH process is discussed and approved.

An analysis of the State Access Management Manual (SAMM) was done to determine if any criteria would be met based on requirements by the NMDOT. Criteria for deceleration lanes was validated with a design speed of 55 mph as is posted in the project area. Table 17.B-3 indicates that on a rural two-lane highway such as NM 14 in the project area, a left turn volume of 20 vehicles per hour requires a left turn deceleration lane.

The assessment for the operations of the site indicated a left turn deceleration lane is not warranted due to the small volume that will be traveling to the site. This assessment was also conducted for the site during construction, where a left turn deceleration lane is warranted due to the high volume of construction vehicles accessing the site. Since these traffic volumes will only be applicable during construction the project team believes that these deceleration lanes should not be implemented.

Assessment

Based on our initial traffic evaluation and STA, Bohannon Huston has determined that additional traffic impact studies are not warranted per the SAMM, as the site is expected to generate 4 peak hour total trips during operations. Alternatively, during construction the site is expected to generate 190 peak hour total trips. Based on the SAMM a TIA is required for developments that generate 100 or more peak hour total trips. As this is a temporary condition due to the construction activity at the site, we believe a TIA should not be required for this development.

Javier Martinez, PE, Assistant District Engineer
NMDOT District 5
AES Rancho Viejo Solar Development – Traffic Assessment
October 5, 2022
Page 3 of 3

Additionally, a driveway permit will be required to move the access point to the north by 350 feet. Should future development activities propagate additional traffic evaluations, these will be conducted to assess those project-specific needs and traffic generation.

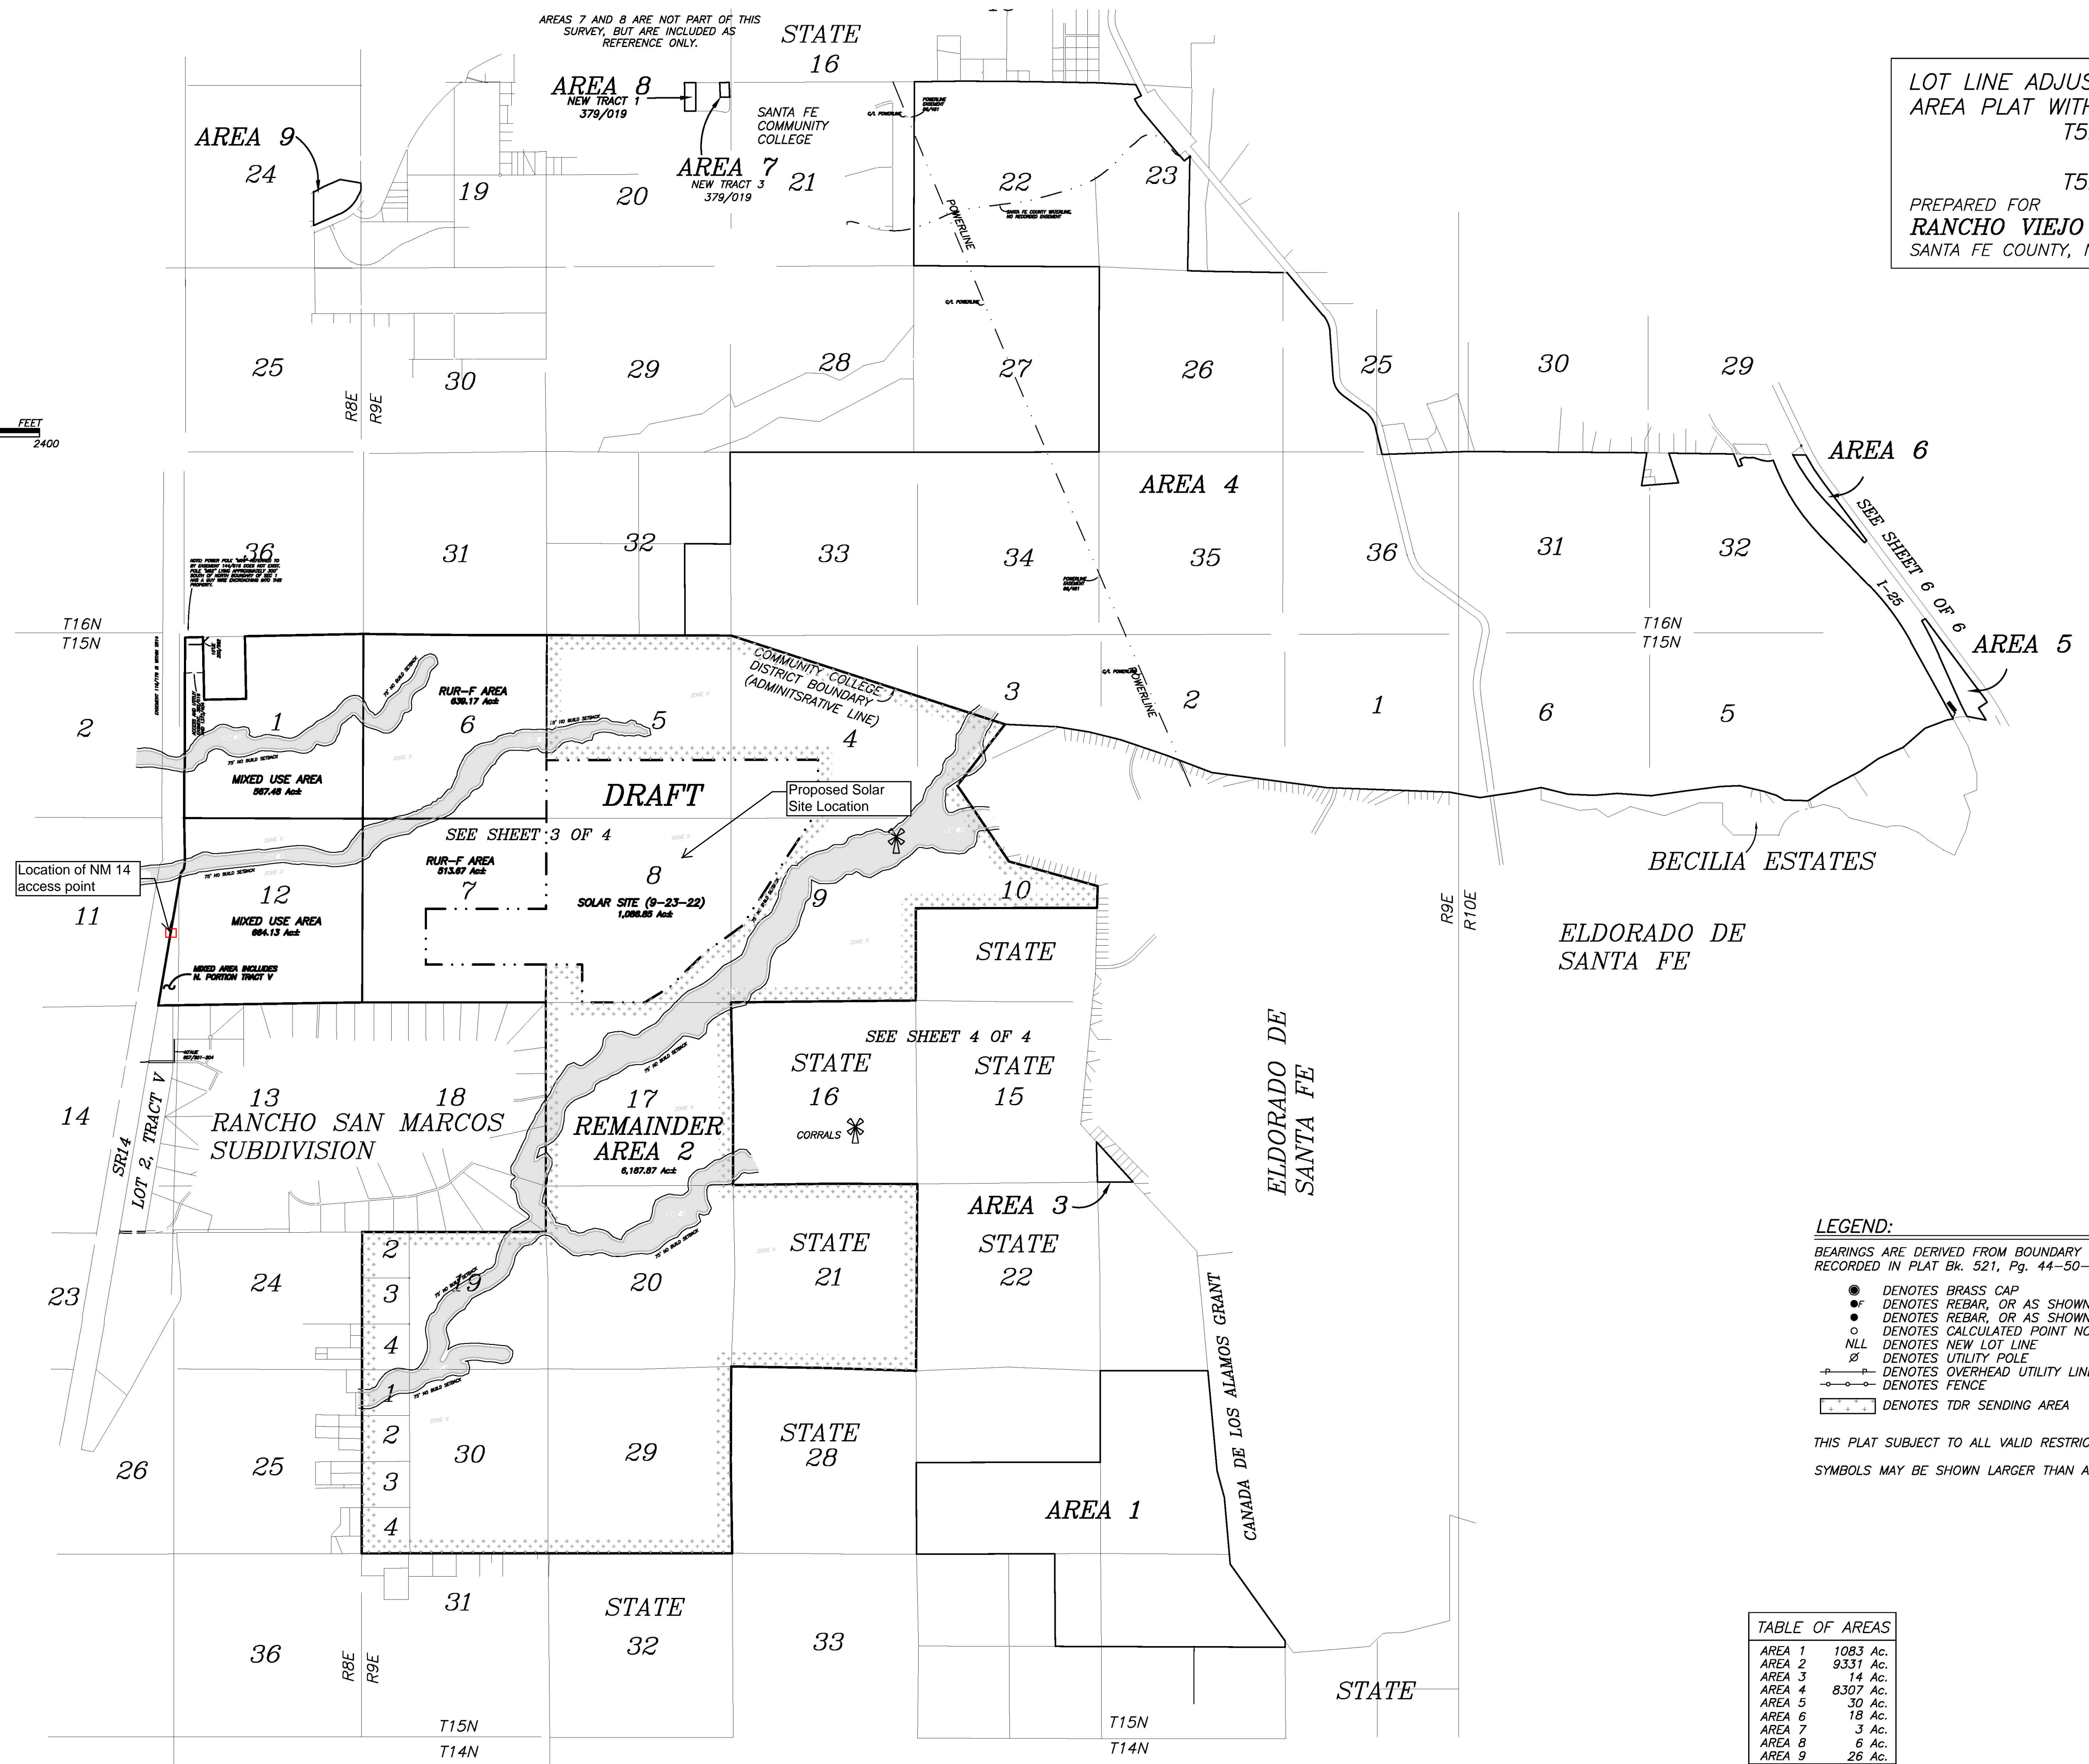

We kindly request formal concurrence that based on our traffic findings, NMDOT does not have any concerns related to traffic and new driveway access off NM 14. Please feel free to contact me at cvermillion@bhinc.com ; 505-923-3318 to discuss. Thank you for your consideration.

REVIEWED

By Gary Funkhouser at 4:05 pm, Dec 19, 2022

Environmental Clearance for Undertakings within NMDOT Right-of-Way

In order to receive environmental clearance for permitted projects in highway rights-of-way, the following information will need to be submitted to the NMDOT Environmental Design Division. Submittals (usually) are reviewed Tuesday of each week. Submittals received on Tuesday will not be reviewed until the following Tuesday. Emergency requests are handled on a case-by-case basis.

1. **Purpose and Nature** of undertaking. Describe the undertaking along with width, length and depth of ground disturbance. Include the methods and machinery to be used.

Widening of an existing 16' access to a 24'-wide access driveway off of NM Highway 14 for access to the proposed AES Rancho Viejo Solar Facility. Construction will utilize standard graders, other earthmoving, asphalt laydown, and compaction equipment.

2. **Is your project resulting from a NMDOT project?** If so, provide the control and/or project number.

No.

3. **Funding Source.** Is the funding private, state or federal? If state and/or federal, list agency(s).

Yes, by the AES Corporation.

4. **Land status.** Is the project on the right-of-way owned by BLM, Forest Service, Tribal land or State Trust land? (NMDOT does not own all highway rights-of-way!)

NMDOT

5. **Permitting agencies.** List other permitting agencies involved besides NMDOT.

N/A

6. **County.** List the county or counties in which the project is located.

Santa Fe County

7. **Highway number.** Indicate the highway, the project will cross or parallel.

NM Highway 14

8. **BOP and EOP.** Provide the milepost locations for the beginning of the project area (BOP) and the end of the project area (EOP). If highway crossing only, list the milepost location, indicate BOP and EOP on quadrangle maps as well.

Milepost 41.52.

9. **Side(s)** of the road. Indicate of which side of the road the project will be located using cardinal directions (north, south, east, west). List all project crossings of the highway by milepost.

East side of NM-14, just north of the existing Turquoise Train Charter School.

10. **Length** of the project. Indicate the length of the project within NMDOT right-of-way in terms of feet and/or miles.

New, 24'-wide access driveway off of NM Highway 14 for access to the proposed AES Rancho Viejo Solar Facility.

11. **Provide the legal description** of the project area: Township, Range, and Section(s).

Lot 2, Tract V, within T.15N, R.8E., N.M.P.M., Santa Fe County, NM
prepared by Dawson Surveys Inc. on 08/14/19 for Rancho Viejo Limited Partnership.

12. **USGS 1:24,000(7.5') Quadrangle map.** List the name(s) of the USGS quadrangle map(s) on which the project is located.

The USGS Quadrangle map is named "Turquoise Hill, NM 2020". The USGS Quadrangle map and a .kmz of the site are enclosed.

13. Include the appropriate portion of the **USGS 1:24,000 (7.5') Quadrangle map(s)** with the project area indicated by an **X** if a crossing, or **BOP** and **EOP** if linear. **Do not reduce or enlarge.** Quad map images can be printed at no charge from the website <http://terraserver.usa.com/>. The site location is indicated by a red x on the enclosed quadrangle map.

14. **Do not** send photos (including aerial photos or photo maps) unless they are scanned or sent via US Mail. Faxed photos come out entirely black.

15. Include your name, company (if applicable), phone #, fax # and email address (if you use one).

Joshua Neal
Bohannon Huston, 505.798.7803, jneal@bhinc.com

16. Submit your requests by email, by fax **OR** by mail. Send in one format only- **DO NOT** send in multiple formats.

Send clearance requests to:

NMDOT Drainage Design Bureau's Comments

The NMDOT Drainage Design Bureau has completed its evaluation of drainage impacts from your development. The Grading Plan dated 12/22/22 and submitted through email by Joshua Neal on 12/22/22, demonstrate that the proposed development does not create adverse drainage effects to NMDOT ROW or you have provided appropriate mitigation for any such impacts. The submittal is acceptable with respect to drainage requirements. This email can be attached to your access permit application and submitted to the District 5 Traffic Engineer for District Approval.
