Re: Summary of Field Activities and Analytical Results
Fourth Quarter Groundwater Monitoring Event
City of Santa Fe Paseo Real Wastewater Reclamation Facility

Dear Ms. Ewing:

Daniel B. Stephens & Associates, Inc. (DBS&A) is pleased to provide this letter report to Hazen and Sawyer (Hazen) summarizing results of the fourth quarter groundwater monitoring event conducted at the City of Santa Fe (the City) Paseo Real Wastewater Reclamation Facility (PRWRF) in Santa Fe, New Mexico (the site) (Figure 1).

Background

The City historically used the site as a facility for sludge disposal by land application. The PRWRF was constructed in the 1960s. The first discharge permit was issued for the land application of sludge in June 1984, but it is unknown when the practice began. Land application activities were discontinued on March 9, 2022. Historical land application areas prior to and after 2010 are shown on Figure 1.

Soil and hydromulch were applied to the ground surface after land application of sludge was discontinued at the site. There are seven groundwater monitor wells associated with the site. MW-3 is located hydrologically upgradient of the facility. MW-1, MW-2, MW-5, MW-6, and MW-7 are located hydrologically downgradient of the facility's former disposal areas. MW-4A is located hydrologically downgradient of the facility's outfall to the Santa Fe River (Figure 1). The wells were previously sampled by DBS&A in August 2023.

During the second and third quarter groundwater monitoring events conducted in June and September 2024, respectively, poly- and perfluoroalkyl substances (PFAS) analytes were detected in samples collected from wells MW-1 and MW-4A. One PFAS analyte was detected in the sample collected from MW-3 during the third quarter monitoring event, but this contamination may be from the sampling or analytical process and may not be representative of the groundwater in the location of MW-3. Concentrations of all PFAS were below the New Mexico Environment Department (NMED) tap water noncancer screening levels provided in the NMED November 2022 risk assessment guidance document (NMED, 2022).

This report summarizes the results of the fourth quarter groundwater monitoring event conducted on December 19, 2024.

Sampling Analytes

This water quality sampling was performed to evaluate whether there is PFAS contamination in groundwater below the former sludge disposal facility. PFAS analytes and their acronyms are listed in Table 1. PFAS analytes with detections in December 2024 and applicable screening levels are listed in Table 2.

Scope of Work

All activities were conducted in accordance with the approved scope of work. Field notes documenting sample collection activities are provided in Attachment 1.

Groundwater monitoring was conducted at the site on December 19, 2024. The quarterly monitoring event included measurement of water levels and collection of groundwater samples from monitor wells associated with the site (MW-1 through MW-7) (Figure 1). One duplicate sample and one field blank quality control sample were also collected.

Groundwater monitoring activities were conducted in accordance with the procedures and protocols set forth in the approved scope of work, which include eliminating potential sources of PFAS in field clothing, field equipment, sample containers, and supplies for equipment decontamination. For example, items banned from the work area included clothing washed with fabric softener, plastic clipboards and binders, adhesives, all materials containing Teflon, and most brands of waterproof field logbooks. DBS&A personnel refrain from the use of cosmetics, hand creams, moisturizers, sunscreen, and insect repellent when sampling for PFAS. These protocols are discussed at daily tailgate safety meetings and are strictly enforced. DBS&A has based these protocols on guidance published by the California State Water Resources Control Board (SWRCB) Division of Drinking Water (SWRCB, 2020).

Fluid levels were gauged in the monitor wells using a decontaminated electronic water level indicator. Water level elevations are provided in Table 3.

Prior to sampling, monitor wells were purged of a minimum of three casing volumes using dedicated pumps. Field parameters, including specific conductivity, pH, and temperature, were measured in the monitor wells during purging and recorded on the field sampling records (Attachment 1). Purge water was collected in 55-gallon drums at each well location pending laboratory results and proper disposal.

The groundwater samples collected from the monitor wells were analyzed for PFAS using U.S. Environmental Protection Agency (EPA) method 1633. Enthalpy Analytical Laboratory (Enthalpy) in El Dorado Hills, California performed all chemical analysis of the

groundwater samples following their corporate quality assurance program. Samples were preserved on ice and accompanied by full chain of custody documentation at all times in accordance with industry best practices and DBS&A standard operating procedures (SOPs).

Results

Water Level Elevations

Water levels measured in monitor wells during the current monitoring event are presented in Table 3.

Water levels measured during the current monitoring event were used to construct the potentiometric surface map provided in Figure 2. Groundwater flow direction at the site was generally to the southwest, with a gradient of 0.0015 foot per foot (ft/ft), which is consistent with previous monitoring events.

Analytical Results

Groundwater analytical results for the PFAS analytes that were detected and/or have applicable screening levels are summarized in Table 2 and on Figure 3. The complete laboratory report, including chain of custody, is provided in Attachment 2.

PFAS analytes were detected in two of the seven sampled wells:

- MW-1: PFBA (10.4 nanograms per liter [ng/L]), PFPeA (21.3 ng/L), PFHxA (16.7 ng/L), PFHpA (4.33 ng/L), PFOA (5.42 ng/L), PFBS (11.4 ng/L), PFPeS (2.01 ng/L), PFHxS (6.04 ng/L), and PFOS (1.56 ng/L)
- MW-4A: PFBS (2.21 ng/L)

Concentrations of all PFAS were below the NMED tap water noncancer screening levels provided in the NMED November 2022 risk assessment guidance document (NMED, 2022). PFAS were not detected at concentrations above laboratory reporting limits in wells MW-2, MW-3, MW-5, MW-6, and MW-7. Detections of PFAS analytes in monitor wells MW-1 and MW-4A during this monitoring event are consistent with the detections during the June and September 2024 monitoring events. MW-1 is located on the west side of the facility. MW-4A is located northwest of the facility and downgradient of the outfall, near the discharge channel to the Santa Fe River.

During the September 2024 monitoring event, PFOSA was detected in the sample collected from MW-3. PFOSA was not detected in the sample collected from MW-3 in June 2024 or during the current monitoring event. The PFOSA detected during the September 2024 monitoring event may have been introduced during the sampling or analytical process due to the prevalence of PFAS in everyday use items and the environment. DBS&A will

Ms. Amy Ewing
February 4, 2025
Page 4

continue to closely monitor PFOSA in MW-3 during future monitoring events to evaluate its source.

Eight PFAS analytes were detected at concentrations above laboratory reporting limits in the duplicate sample (MW-9), which is consistent with analytical results in the corresponding primary sample collected from MW-1 (Table 2). Concentrations of all PFAS were below laboratory reporting limits in the field blank quality control sample, labeled MW-8 (Attachment 2).

Conclusions and Recommendations

A total of seven monitor wells were sampled as part of the fourth quarter groundwater monitoring event at the site. Based on the results of the current groundwater monitoring event, DBS&A provides the following conclusions regarding groundwater conditions at the site:

- Groundwater beneath the site continues to flow to the southwest.
- PFAS were detected in samples collected from MW-1 (nine analytes) and MW-4A (one analyte) at concentrations below the NMED screening levels.

Based on the findings of the groundwater monitoring, DBS&A recommends that quarterly groundwater monitoring continue at the site through the first quarter 2025 under the approved scope of work to assess long-term or seasonal trends in groundwater quality.

Closing

This letter report serves as the deliverable for the fourth quarter groundwater monitoring event at the site, as specified in the approved scope of work. Please contact me at (505) 822-9400 with any questions.

Sincerely,

DANIEL B. STEPHENS & ASSOCIATES, INC.

Laboratory
Analytical Report

January 09, 2025

**Enthalpy Analytical - El Dorado Hills
Work Order No. 2412178**

Ms. Amy Ewing
Hazen & Sawyer
100 Sun Ave NE, Ste 206
Albuquerque, NM 87109

Dear Ms. Ewing,

Enclosed are the results for the sample set received at Enthalpy Analytical - EDH on December 30, 2024 under your Project Name 'Paseo Real WRF'.

Enthalpy Analytical - EDH is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at emilyuebelhoer@enthalpy.com.

Thank you for choosing Enthalpy Analytical - EDH as part of your analytical support team.

Sincerely,

A handwritten signature in black ink that reads "Emily Uebelhoer".

Emily Uebelhoer
Project Manager

Enthalpy Analytical -EDH certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Enthalpy Analytical -EDH.

Enthalpy Analytical - EDH Work Order No. 2412178
Case Narrative

Sample Condition on Receipt:

Nine aqueous samples were received and stored securely in accordance with Enthalpy Analytical - EDH standard operating procedures and EPA methodology. The samples were received in good condition and within the recommended temperature requirements.

Analytical Notes:

EPA Method 1633 (Aqueous)

The samples were extracted and analyzed for a selected list of PFAS using EPA Method 1633. The results for PFHxS, PFOA, PFOSA, PFOS, PFNA, MeFOSAA, EtFOSAA, MeFOSA, MeFOSE, EtFOSA, EtFOSE include both linear and branched isomers. Results for all other analytes include the linear isomers only.

Holding Times

The samples were extracted and analyzed within the hold times.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank, Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) and Low-Level Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above 1/2 the Reporting Limit concentration. The OPR recoveries were within the method acceptance criteria.

The labeled standard recoveries for all QC and field samples were within the acceptance criteria.

RL - Reporting limit

Results reported to RL.

DATA QUALIFIERS & ABBREVIATIONS

For EPA 1633

B	This compound was also detected in the method blank
Conc.	Concentration
CRS	Cleanup Recovery Standard
D	Dilution
DL	Detection Limit
E	The associated compound concentration exceeded the calibration range of the instrument
I	Ion transition ratio is outside of the acceptance criteria.
IS	Internal Standard
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limit of Detection
LOQ	Limit of Quantitation
M	Estimated Maximum Possible Concentration (CA Region 2 projects only)
MDL	Method Detection Limit
NA	Not applicable
ND	Not Detected
OPR	Ongoing Precision and Recovery sample
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	Recovery and/or RPD was outside laboratory acceptance limits
RL	Reporting Limit
RL	For 537.1, the reported RLs are the MRLs.
TEQ	Toxic Equivalency, sum of the toxic equivalency factors (TEF) multiplied by the sample concentrations.
TEQMax	TEQ calculation that uses the detection limit as the concentration for non-detects
TEQMin	TEQ calculation that uses zero as the concentration for non-detects
TEQRisk	TEQ calculation that uses $\frac{1}{2}$ the detection limit as the concentration for non-detects
U	Not Detected (specific projects only)
*	See Cover Letter

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.
